BCNUEJ examines how we can create more just, resilient, healthy, and sustainable cities.

## What is BCNUEJ?

The Barcelona Lab for Urban Environmental Justice and Sustainability was founded in partnership with the [Institute of Environmental Science and Technology \(ICTA\)](#) at the [Universitat Autònoma de Barcelona \(UAB\)](#) and a research group from the [Hospital del Mar Medical Research Institute \(IMIM\)](#) in Barcelona. The lab develops novel research that builds on urban planning and policy, social inequality, and development studies. Our main emphasis is on the opportunities and challenges created by urban municipal, community, or private initiatives that enhance sustainability, equity, and health in cities.

## Our Research

Our research examines processes and dynamics that lead to more just, resilient, healthy, and sustainable cities, bringing together theory and methods from urban planning, public policy, urban and environmental sociology, urban geography and public health. Our studies analyze the extent to which urban plans and policy decisions contribute to more just, resilient, healthy, and sustainable cities, and how community groups in distressed neighborhoods contest the existence, creation, or exacerbation of environmental inequities as a result of urban (re)development processes and policies.

# Health Inequity

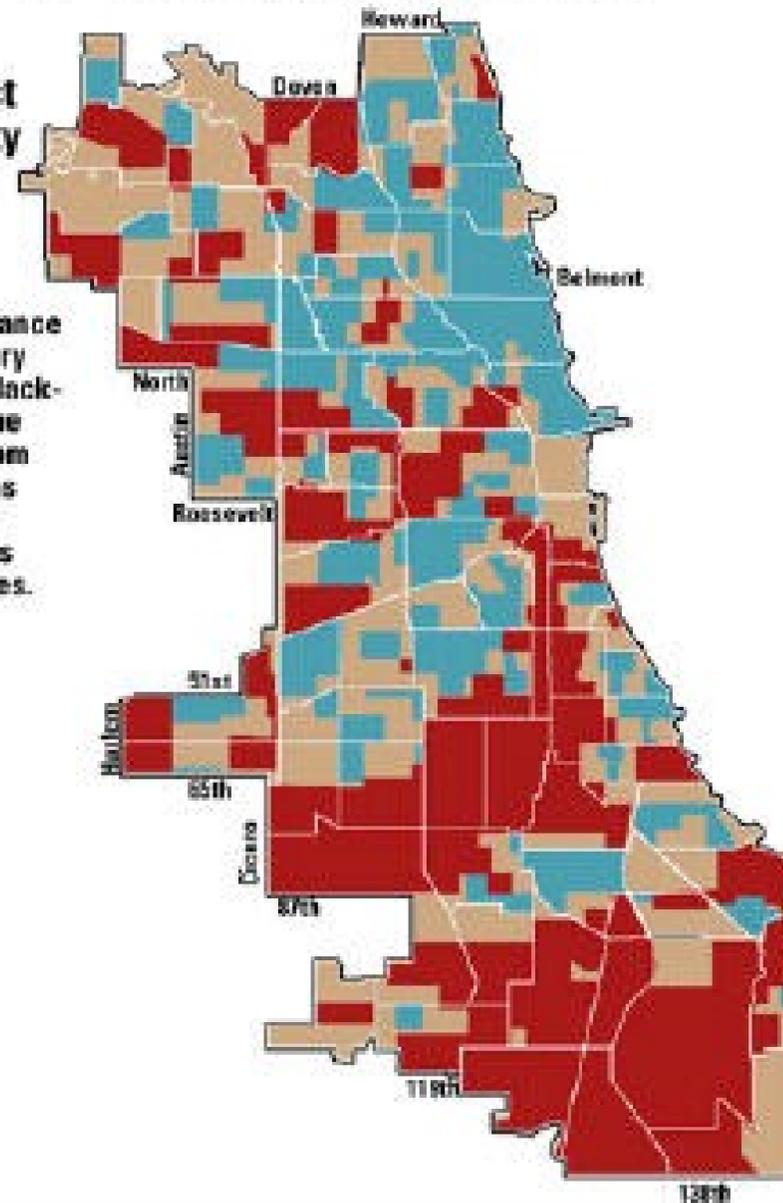

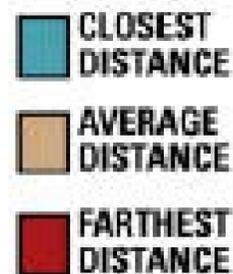

“A difference or disparity in health outcomes that is systematic, avoidable, and **unjust**”

(Whitehead and Whitehead, 1991; Braveman, 2003)

## FOOD DESERTS IN CHICAGO

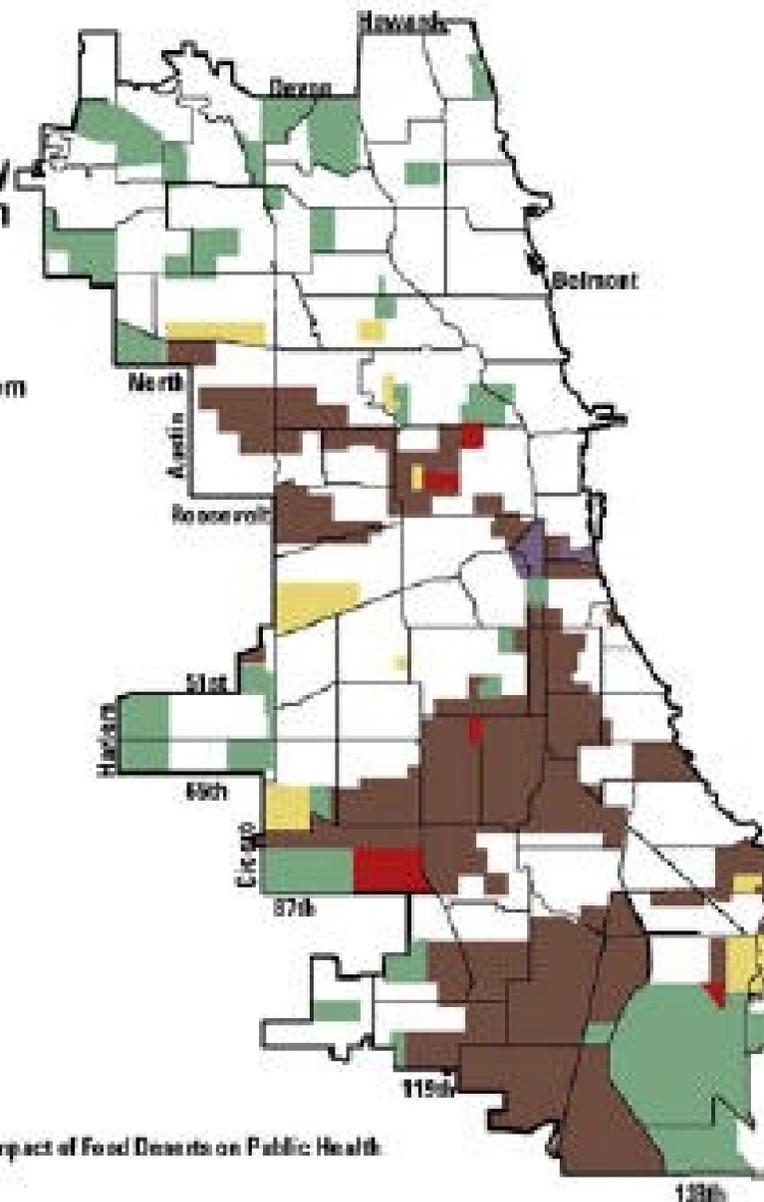

Distance to grocers by tract with community boundaries

The map shows distance to all types of grocery stores in Chicago. Black-colored areas are the farthest distance from grocers. These areas form three key food deserts on Chicago's West and South sides.

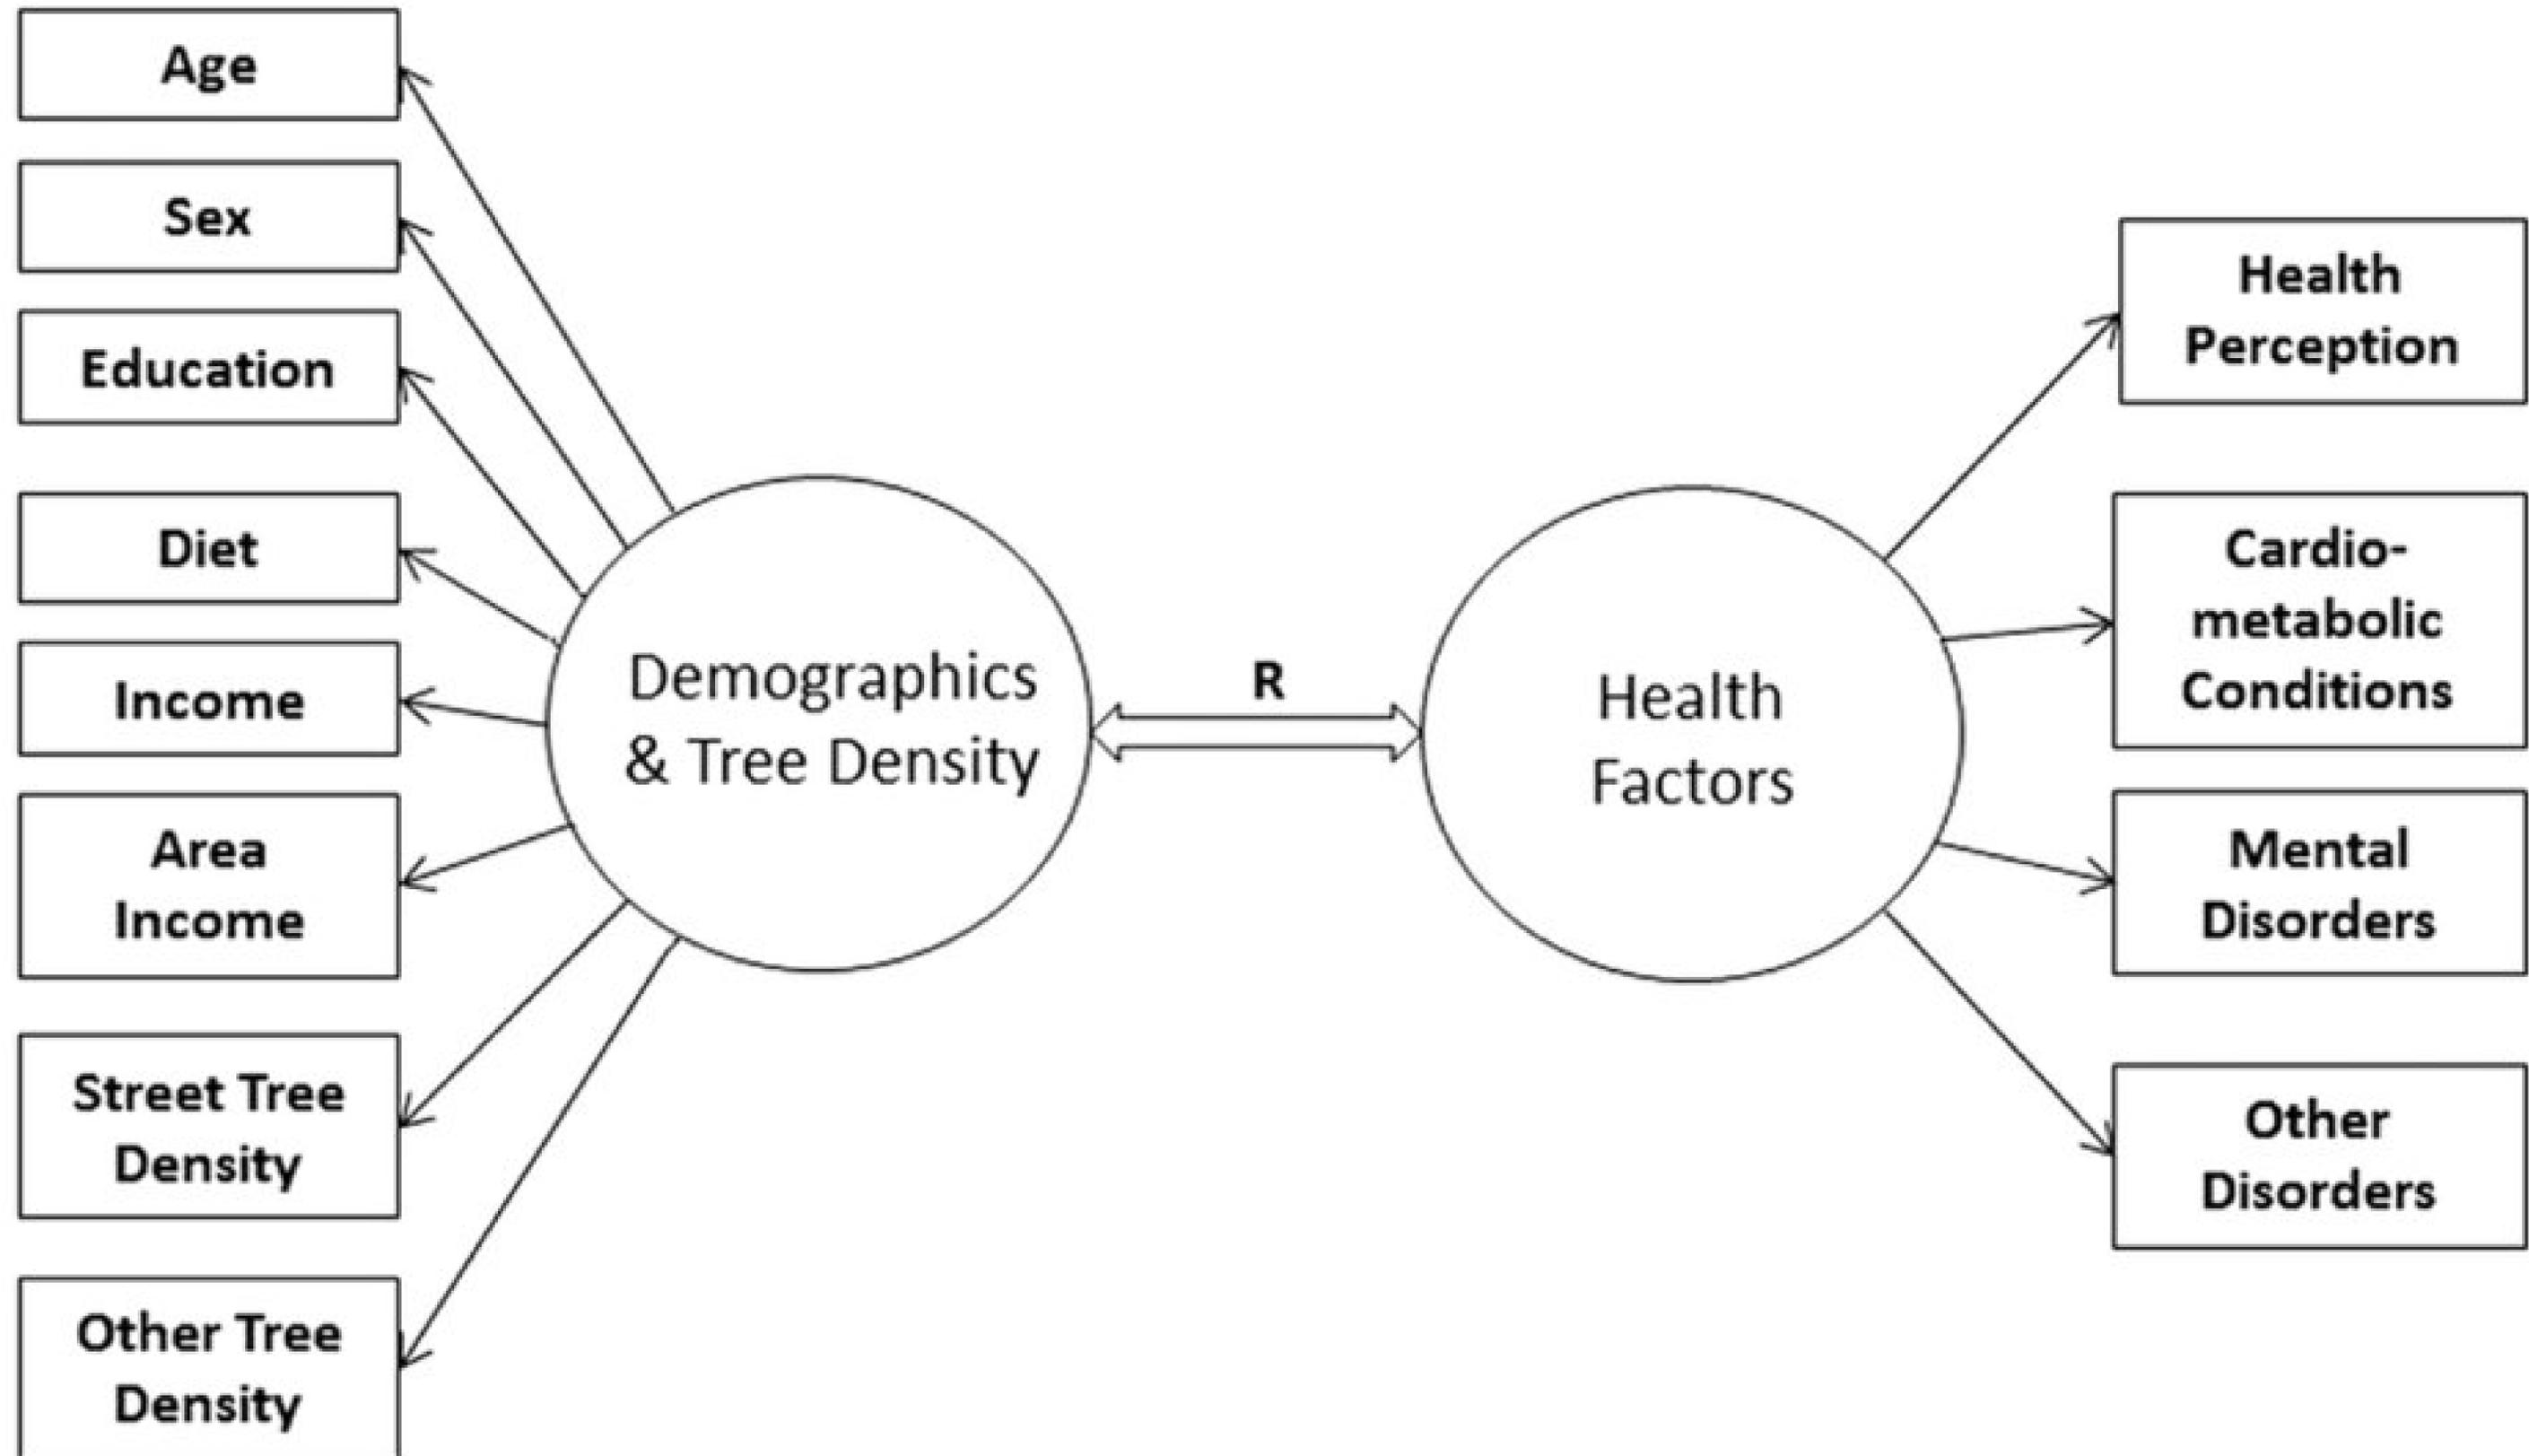

Food deserts are nearly exclusively African-American

The map shows only tracts that are in the farthest distance to grocers and shades them by race.

# OUTLINE

1 Environmental (in)justice, environmental gentrification...What and why?

2 Recent trends and activism in environmental gentrification

3 Green gentrification in Barcelona?

So-called “green” amenities and projects create conditions for the socio-spatial exclusion and invisibilization of the most socially and racially vulnerable residents, their livelihoods, and practices

Parks, greenways, or climate-proofing infrastructure can become GREENLULUS in racially mixed and low-income neighborhoods

# **Environmental (in)justice, environmental gentrification**

What are they and why are they important?

## **Environmental (in)justice:**

Poor and minority residents tend to suffer to a greater extent from environmental toxics, unsafe working conditions, or climate risks

Wellness

# Revitalization and gentrification

- “**Rent gap:**” Difference between “the actual capitalized ground rent of a plot of land given its present use AND the potential ground rent that might be gleaned under a 'higher and better' use” (Smith, 1986)
- Inner city neighborhoods are being rebranded by developers, real estate agents, public officials, and new residents: From urban abandoned ghettos to cultural artifacts and sites for revitalization
- Gentrification characterized by changes in demographic and real estate characteristics, with a combined effect, and by new neighborhood cultural and commercial offerings

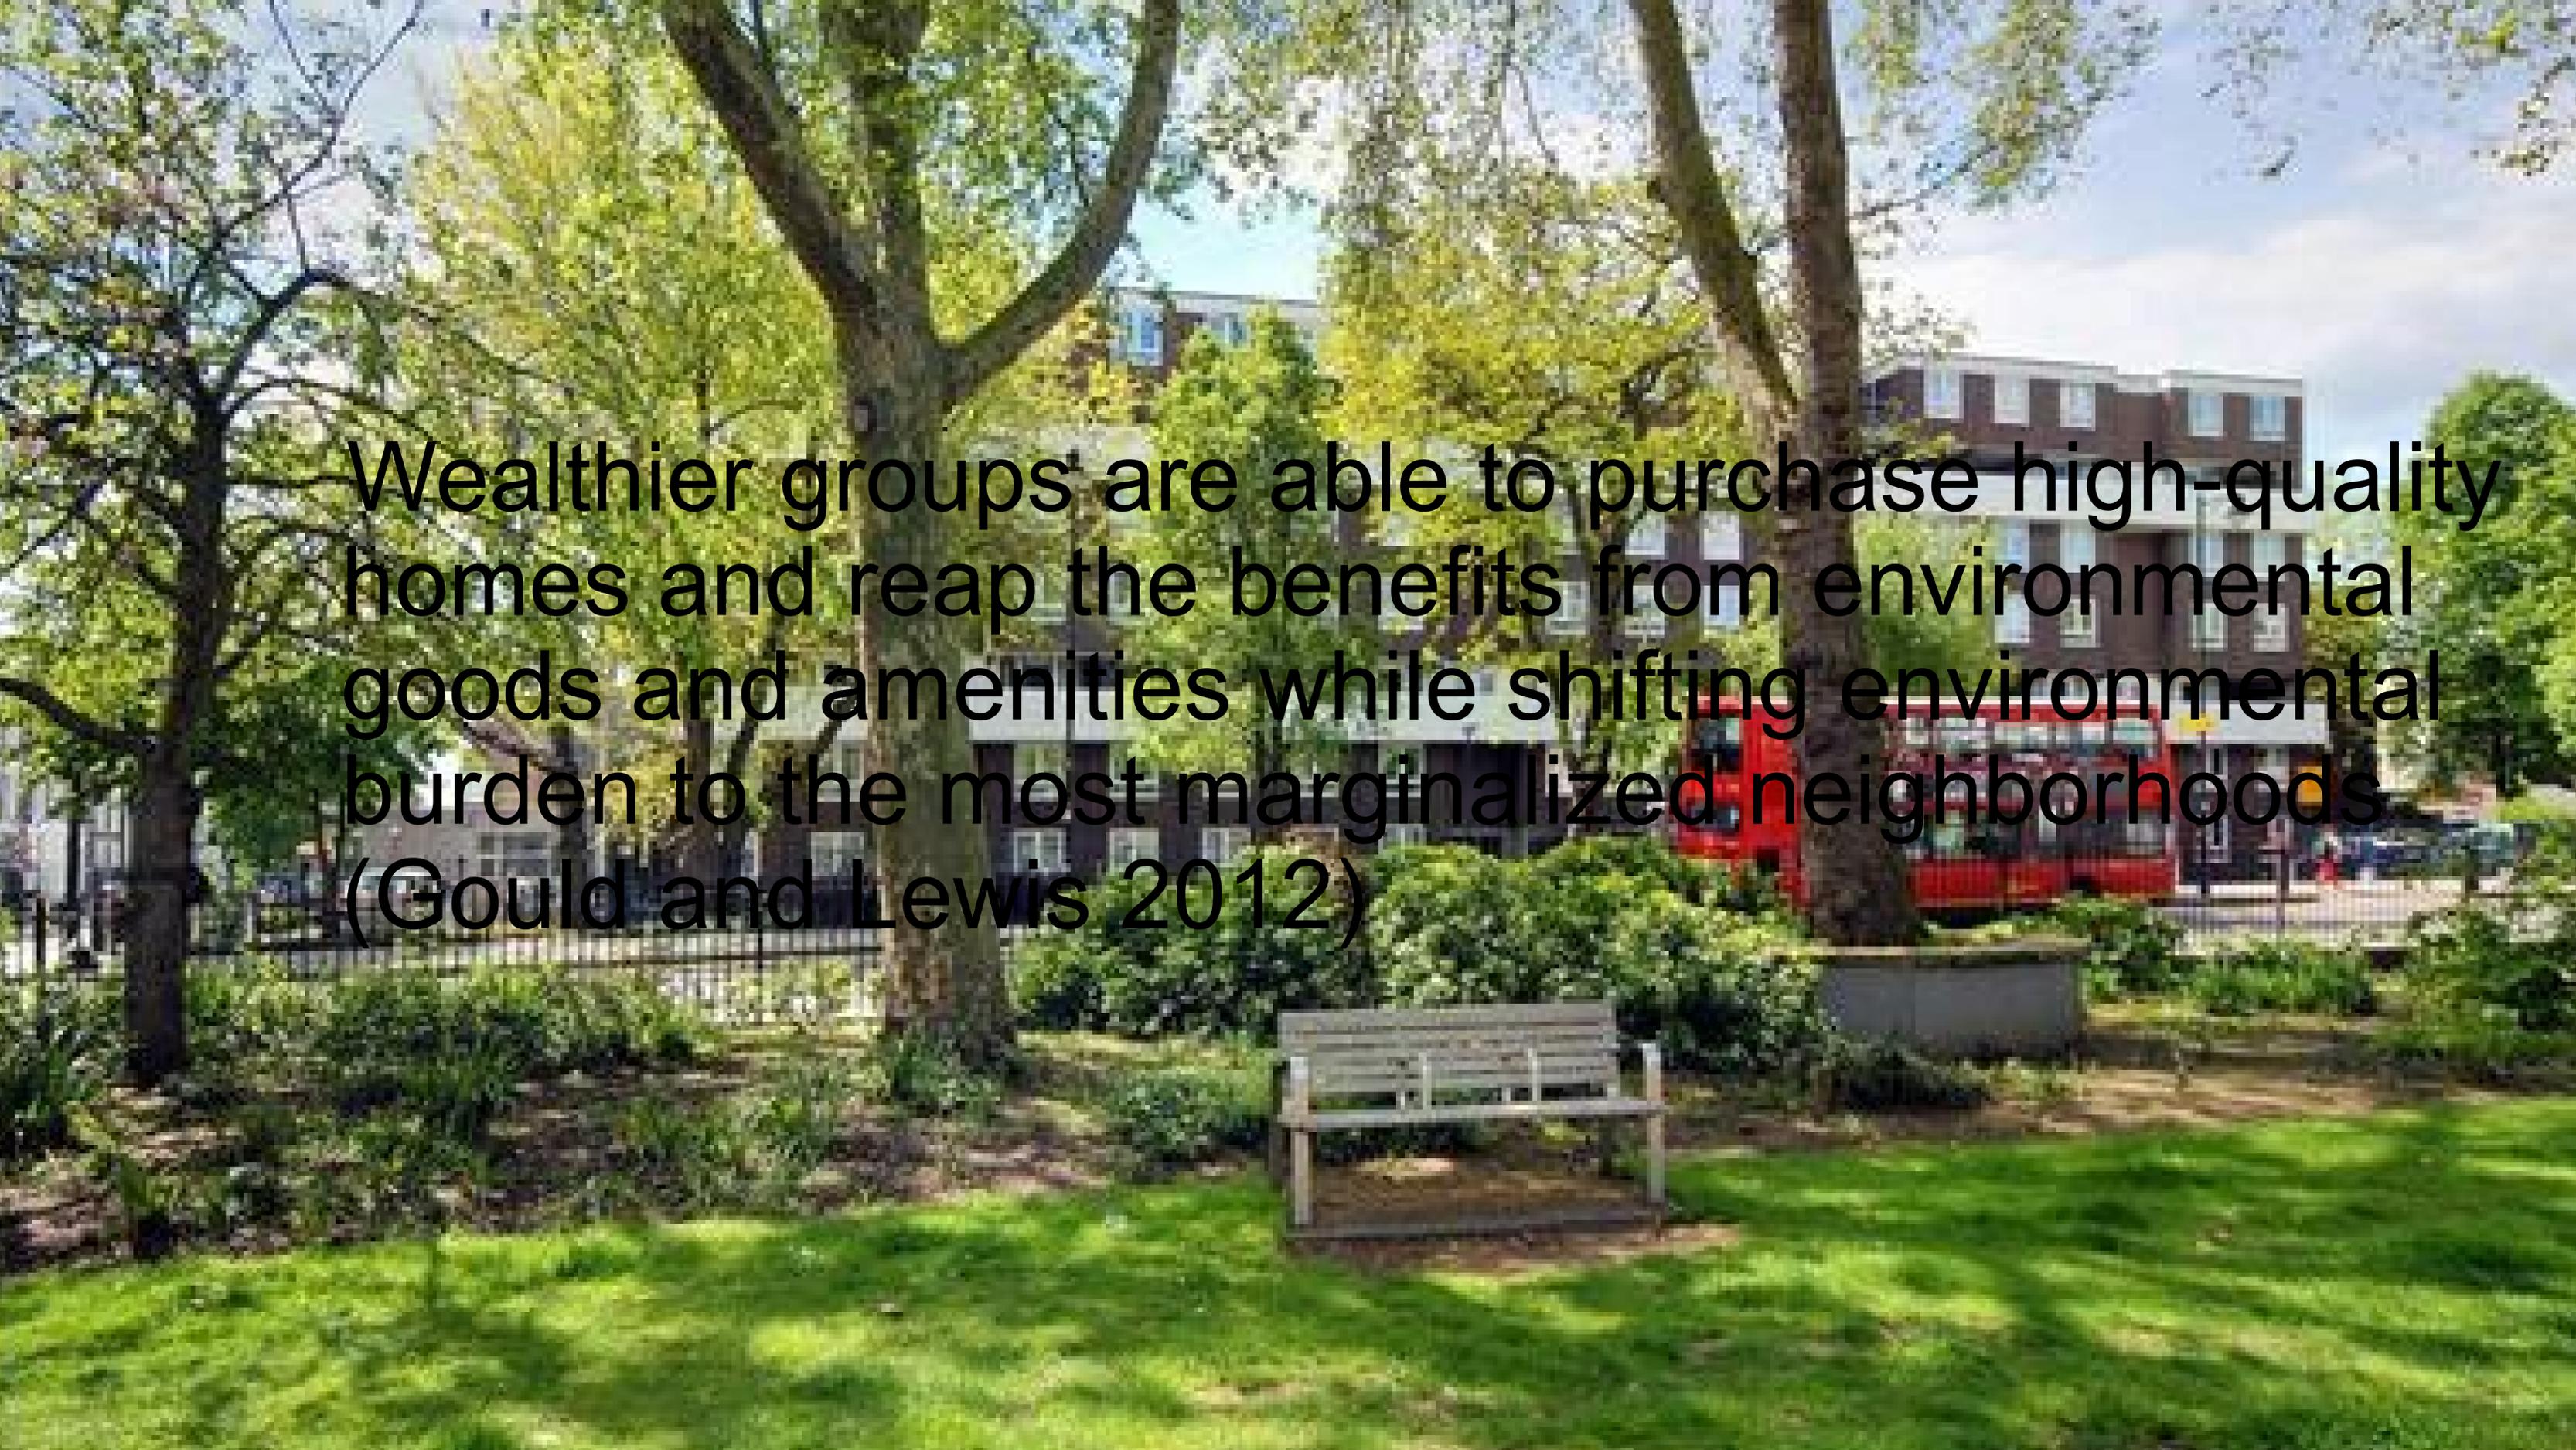

# Gentrification and green gentrification

- New urban environmental transformations and improvements are intertwined with inequality (re)formation and gentrification
- Contaminated land creates a new rent gap
- Removal of sites from the Superfund list results in an increase of 26% in mean household income ([Gamper-Rabindran and Timmins 2011](#))
- Housing values within 400m of a green infrastructure can spike by 30% in comparison with similar properties 1.6km away (Immergluck, 2009)

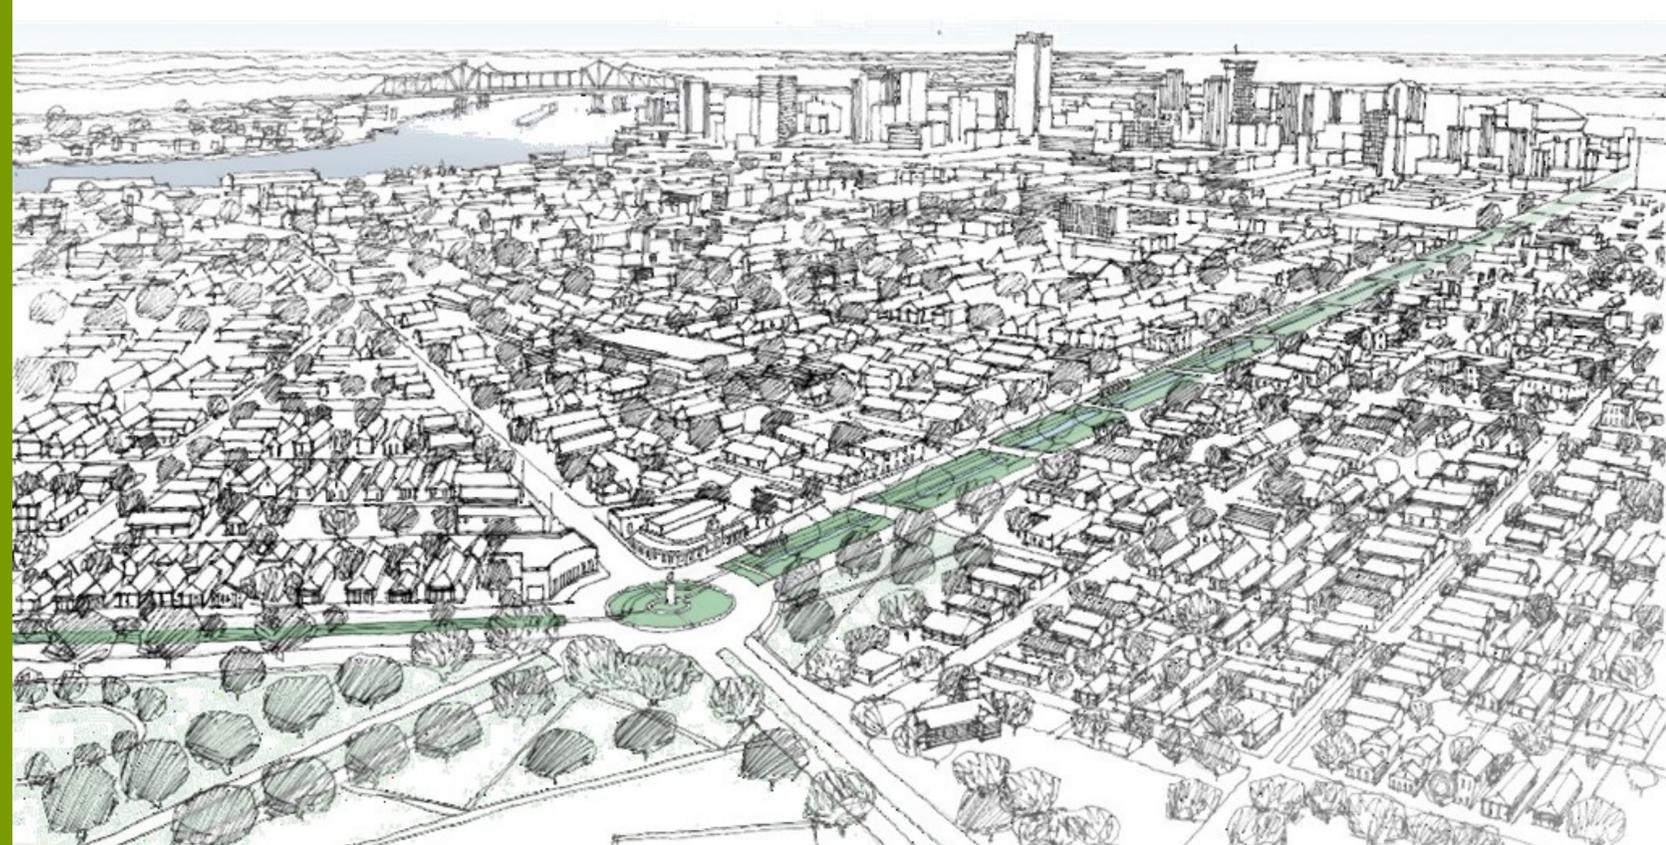

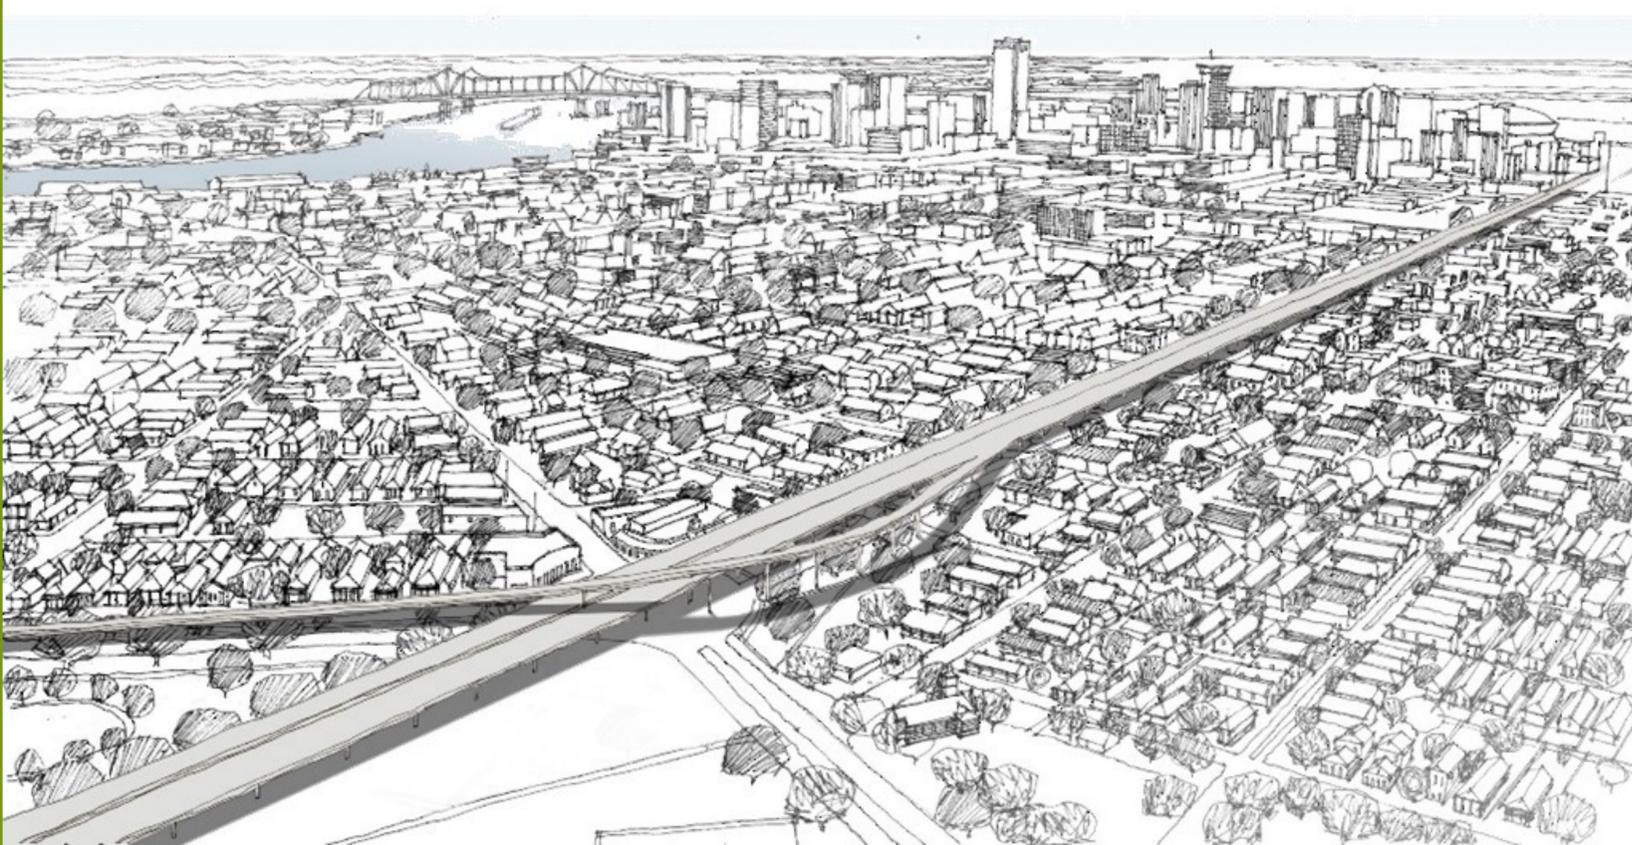

Wealthier groups are able to purchase high-quality homes and reap the benefits from environmental goods and amenities while shifting environmental burden to the most marginalized neighborhoods (Gould and Lewis 2012)

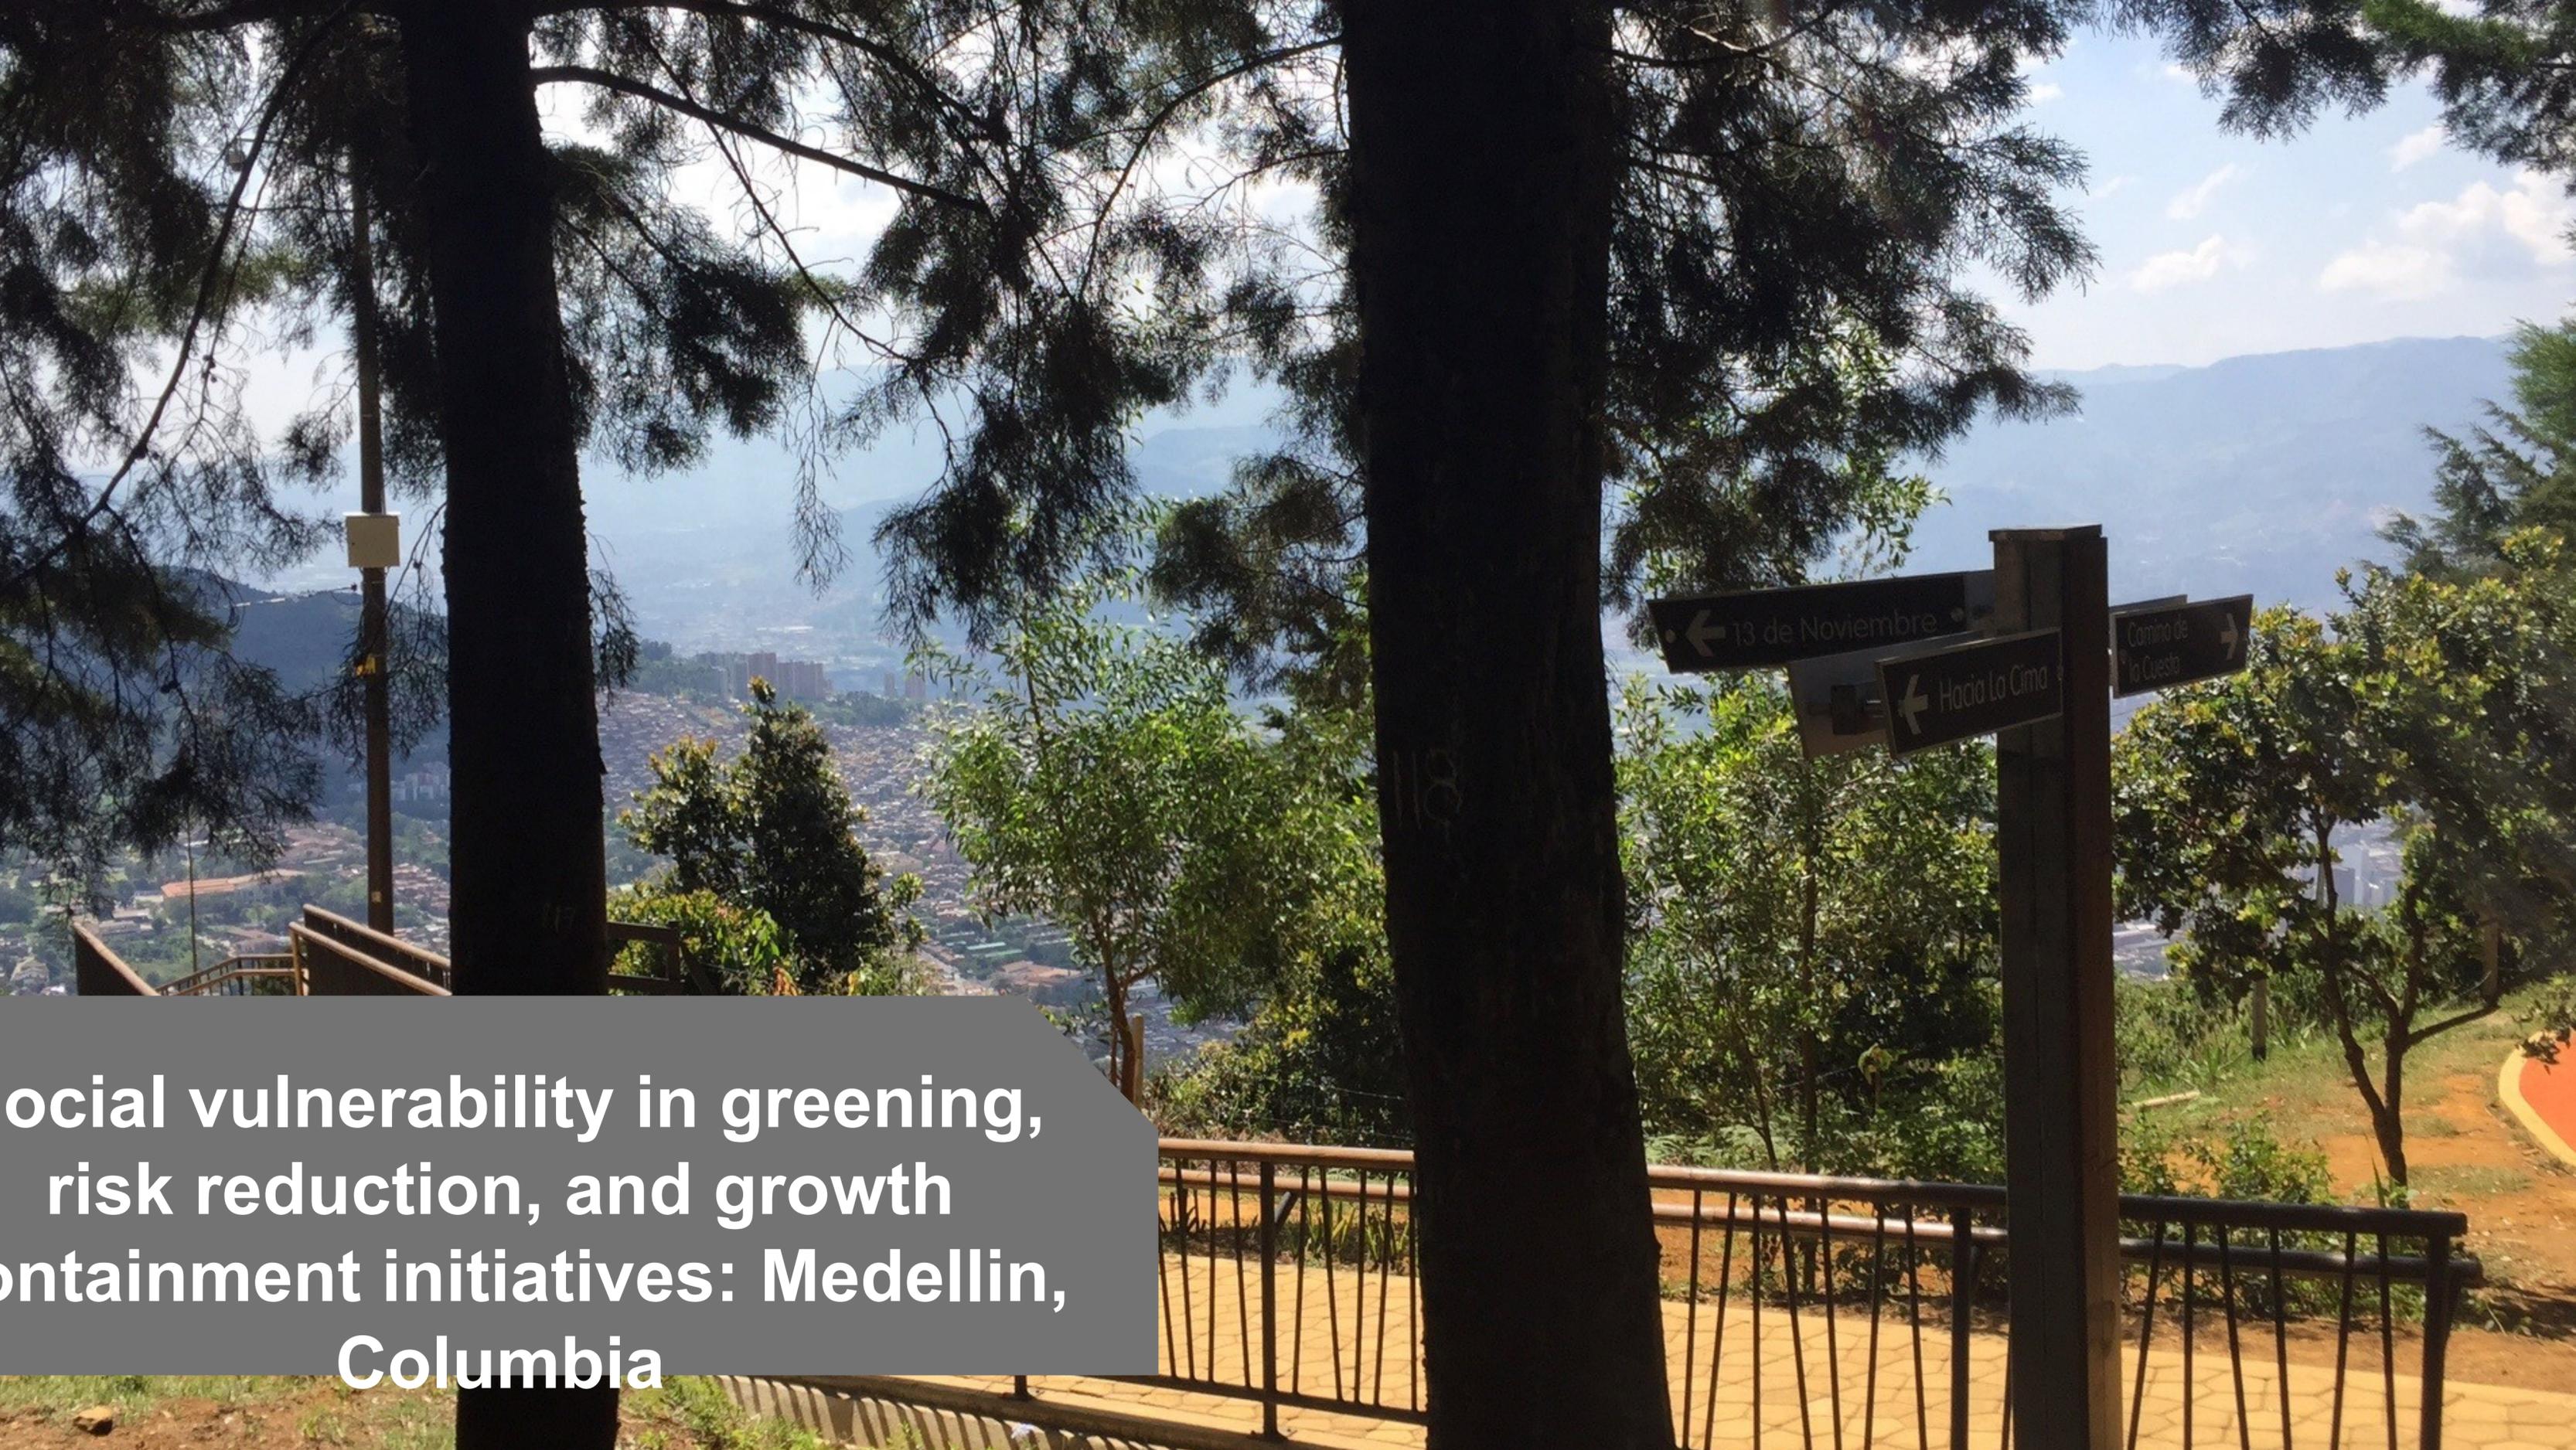

A restored Claiborne Avenue would be very attractive and would enhance the economic potential of the immediate Claiborne Avenue corridor.

Orleans

**ocial vulnerability in greening,  
risk reduction, and growth  
containment initiatives: Medellín,  
Columbia**

**How does city rebranding around  
“green” and “resilience” discourses  
and initiatives create displacement and  
exclusion?**

# Inequities in controlling urban growth and managing climate risks

- Relocation controversies
- Overestimating of risks
- Selective displacement
- Military and construction growth machine
- Lack of meaningful community engagement

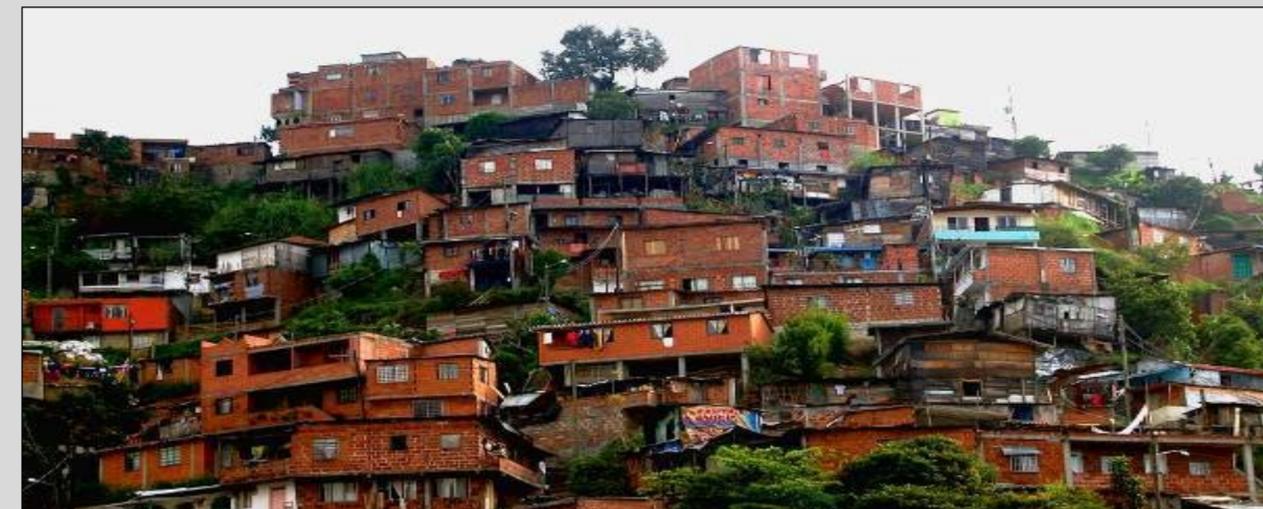

# Public green space enclosure, privatization, and exploitation

- A built-up and manicured “natural” space
- Disciplining nature to create landscapes of privilege and pleasure
- Invisibilization of residents’ relationship to nature
- Professionalization and enclosure of urban agriculture

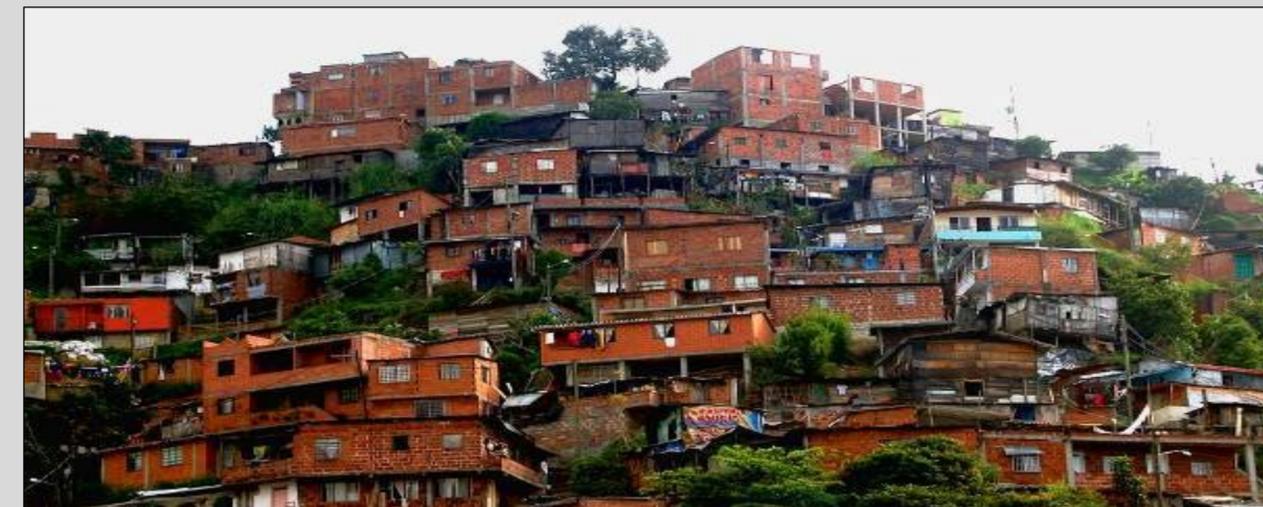

# A new Medellín

For [the municipality], the Jardín Circunvalar is the “redemption of Medellín” and it is created for skilled and prepared residents – residents able to professionally compete – and for tourists who consume in the new spaces. The JC is not built for the people with little education and little ability to survive in the urban capitalist economy. Those are the ones who end up being expelled from their houses, and facing again multiple forms of social and health and food risks. There is now this idea of false and impossible competition between residents of comunas and higher classes/visitors that are now the emblem of a new Medellín (Community leader 2016)

# Double Trauma

- Memory is not only connected to ongoing, hard work and to community-building practices in their territory. It is also connected to traumatic experiences regarding land dispossession and the memories of loved ones lost to violence in previous lands and this new territory. (Community leader, 2016)
- “If they negotiate with armed actors at the national level, why can't they do it with us? We are not occupying these slopes because we want to, but because the conflict forced us to move there. We don't need a green belt, nor a encircling garden, we want the right to live in a dignified way in our territories. We demand the reparation to the

- 
- Green infrastructure emphasizes resilience and growth containment to the exclusion of other elements of well-being and health and of a consideration of environmental equity
  - Containment and beautification through greening of poor areas and through land grabbing is transforming them into landscapes of pleasure
  - Dispossession of community assets for the “greatest public good”
  - Low-income residents are not only replaced by wealthy newcomers but by greenery and by the visitors who come to enjoy it

3

# GREENLULUS

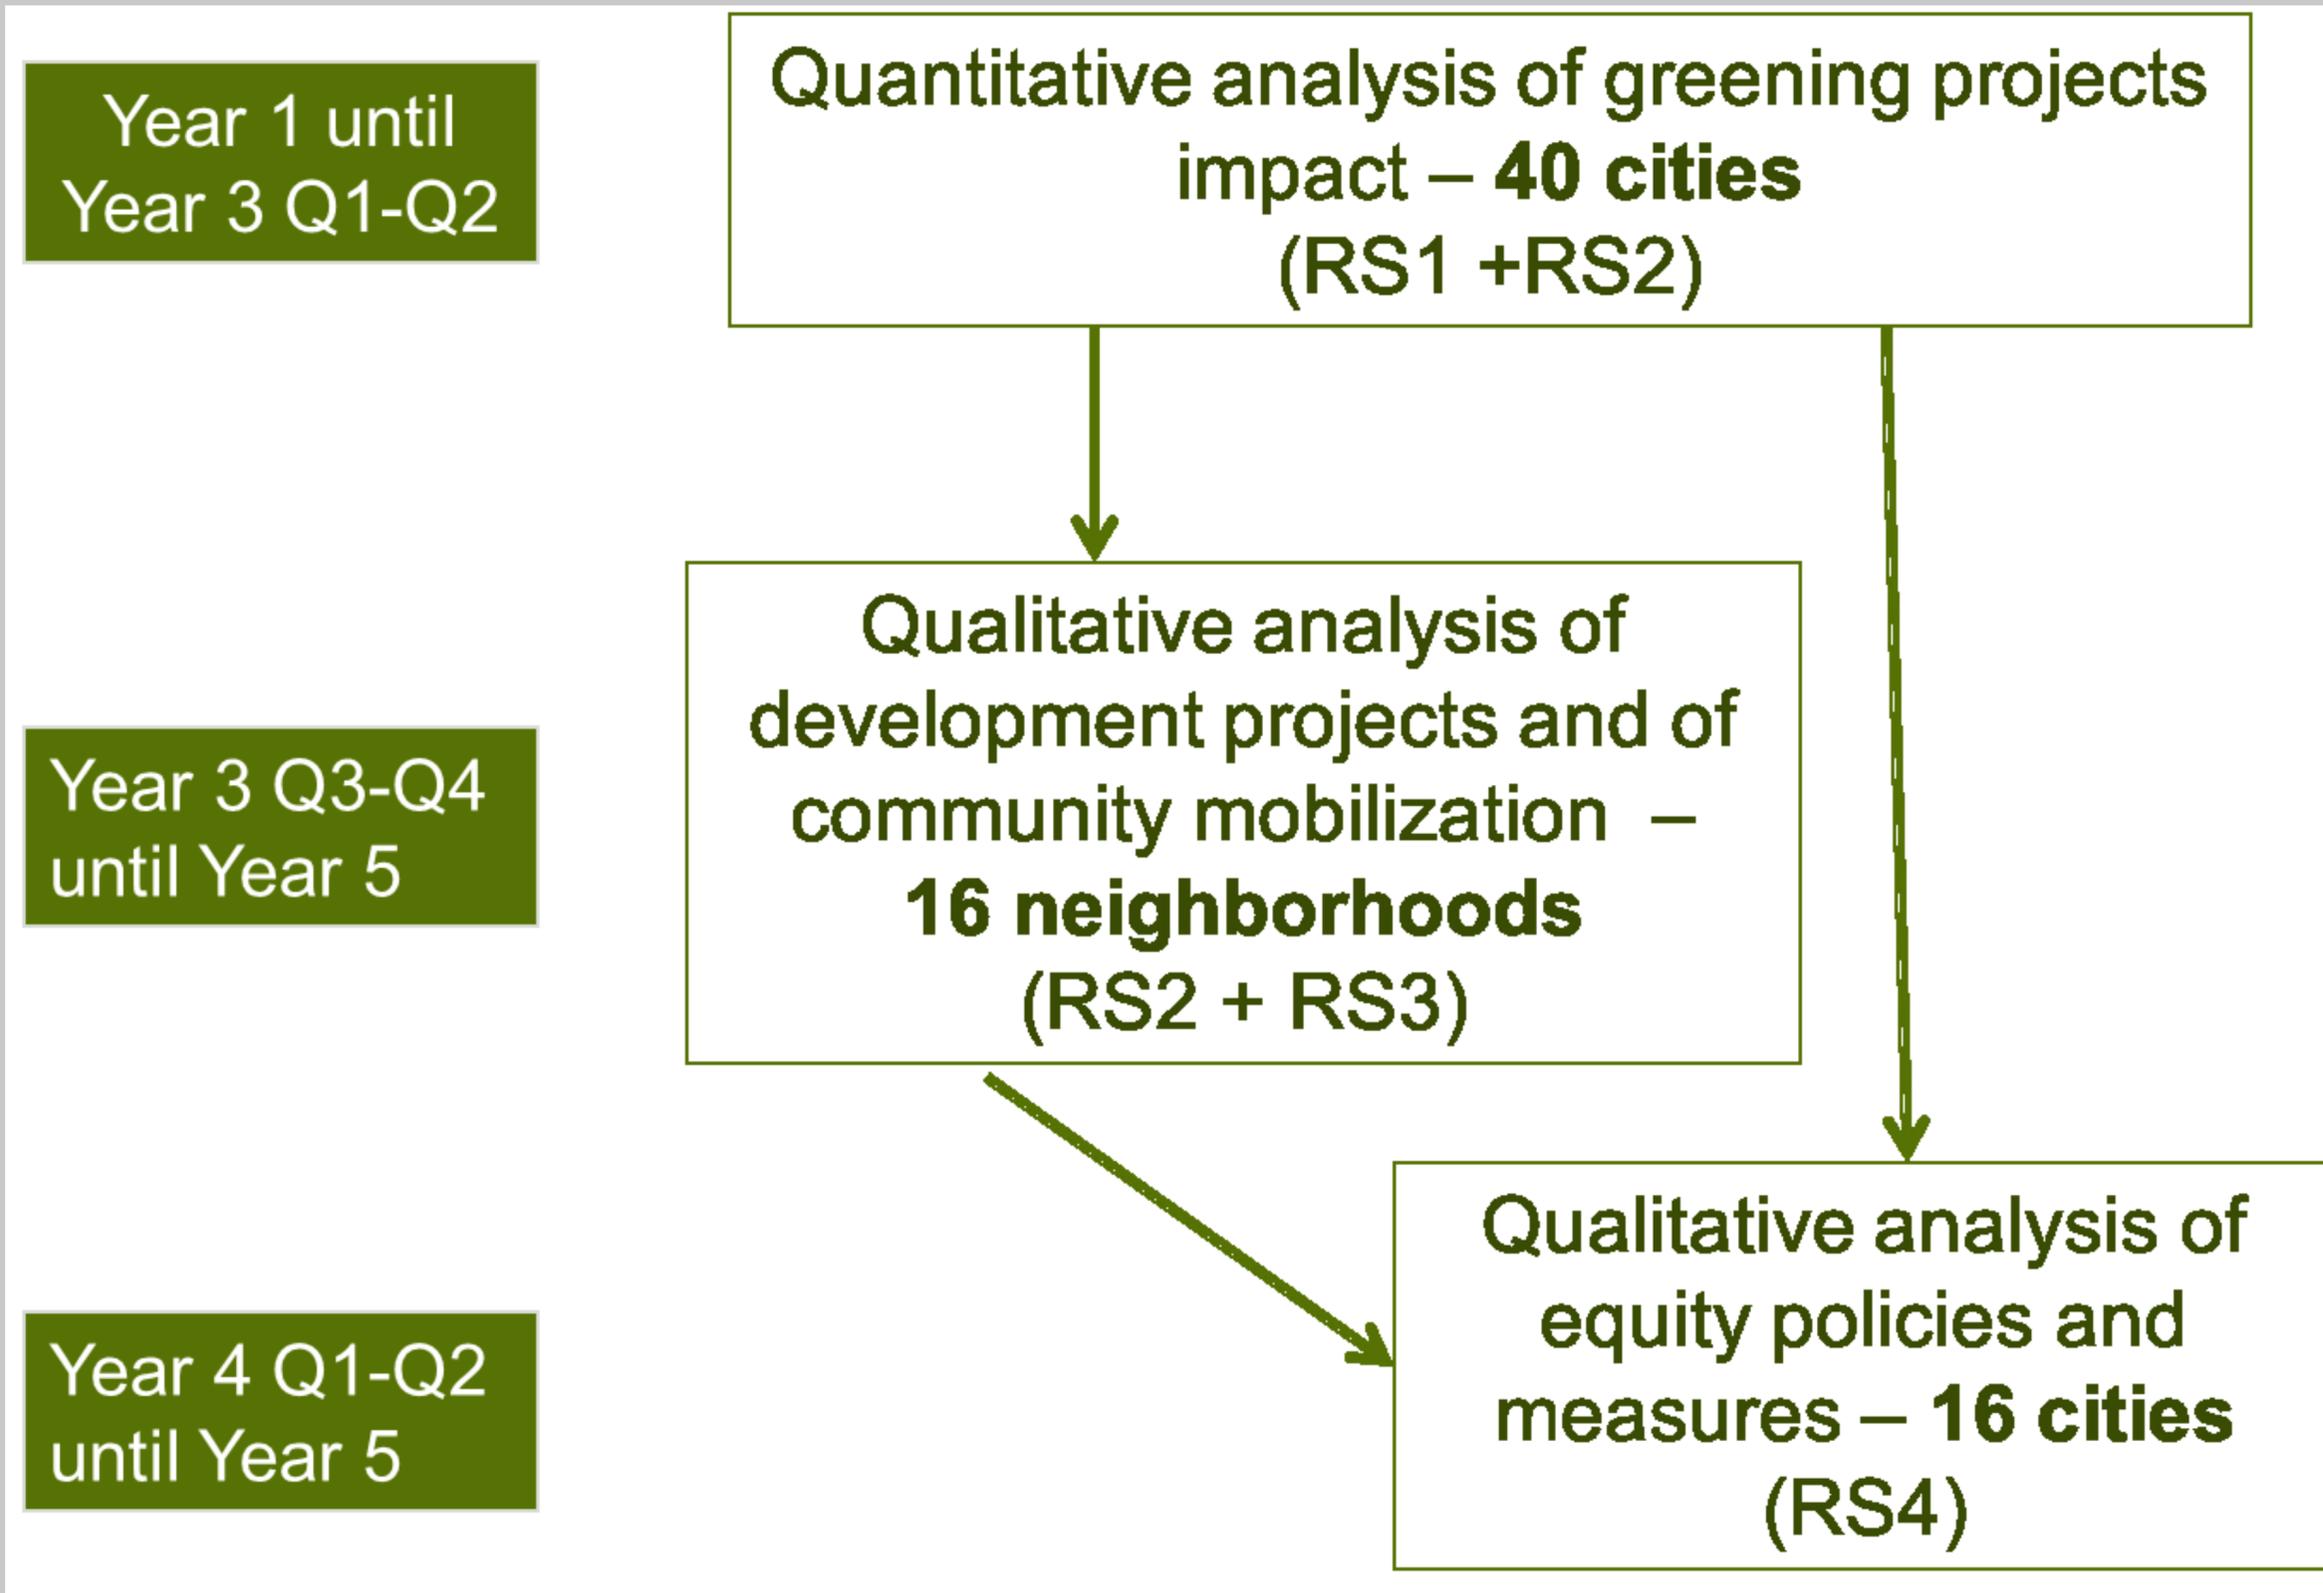

## Motivating questions

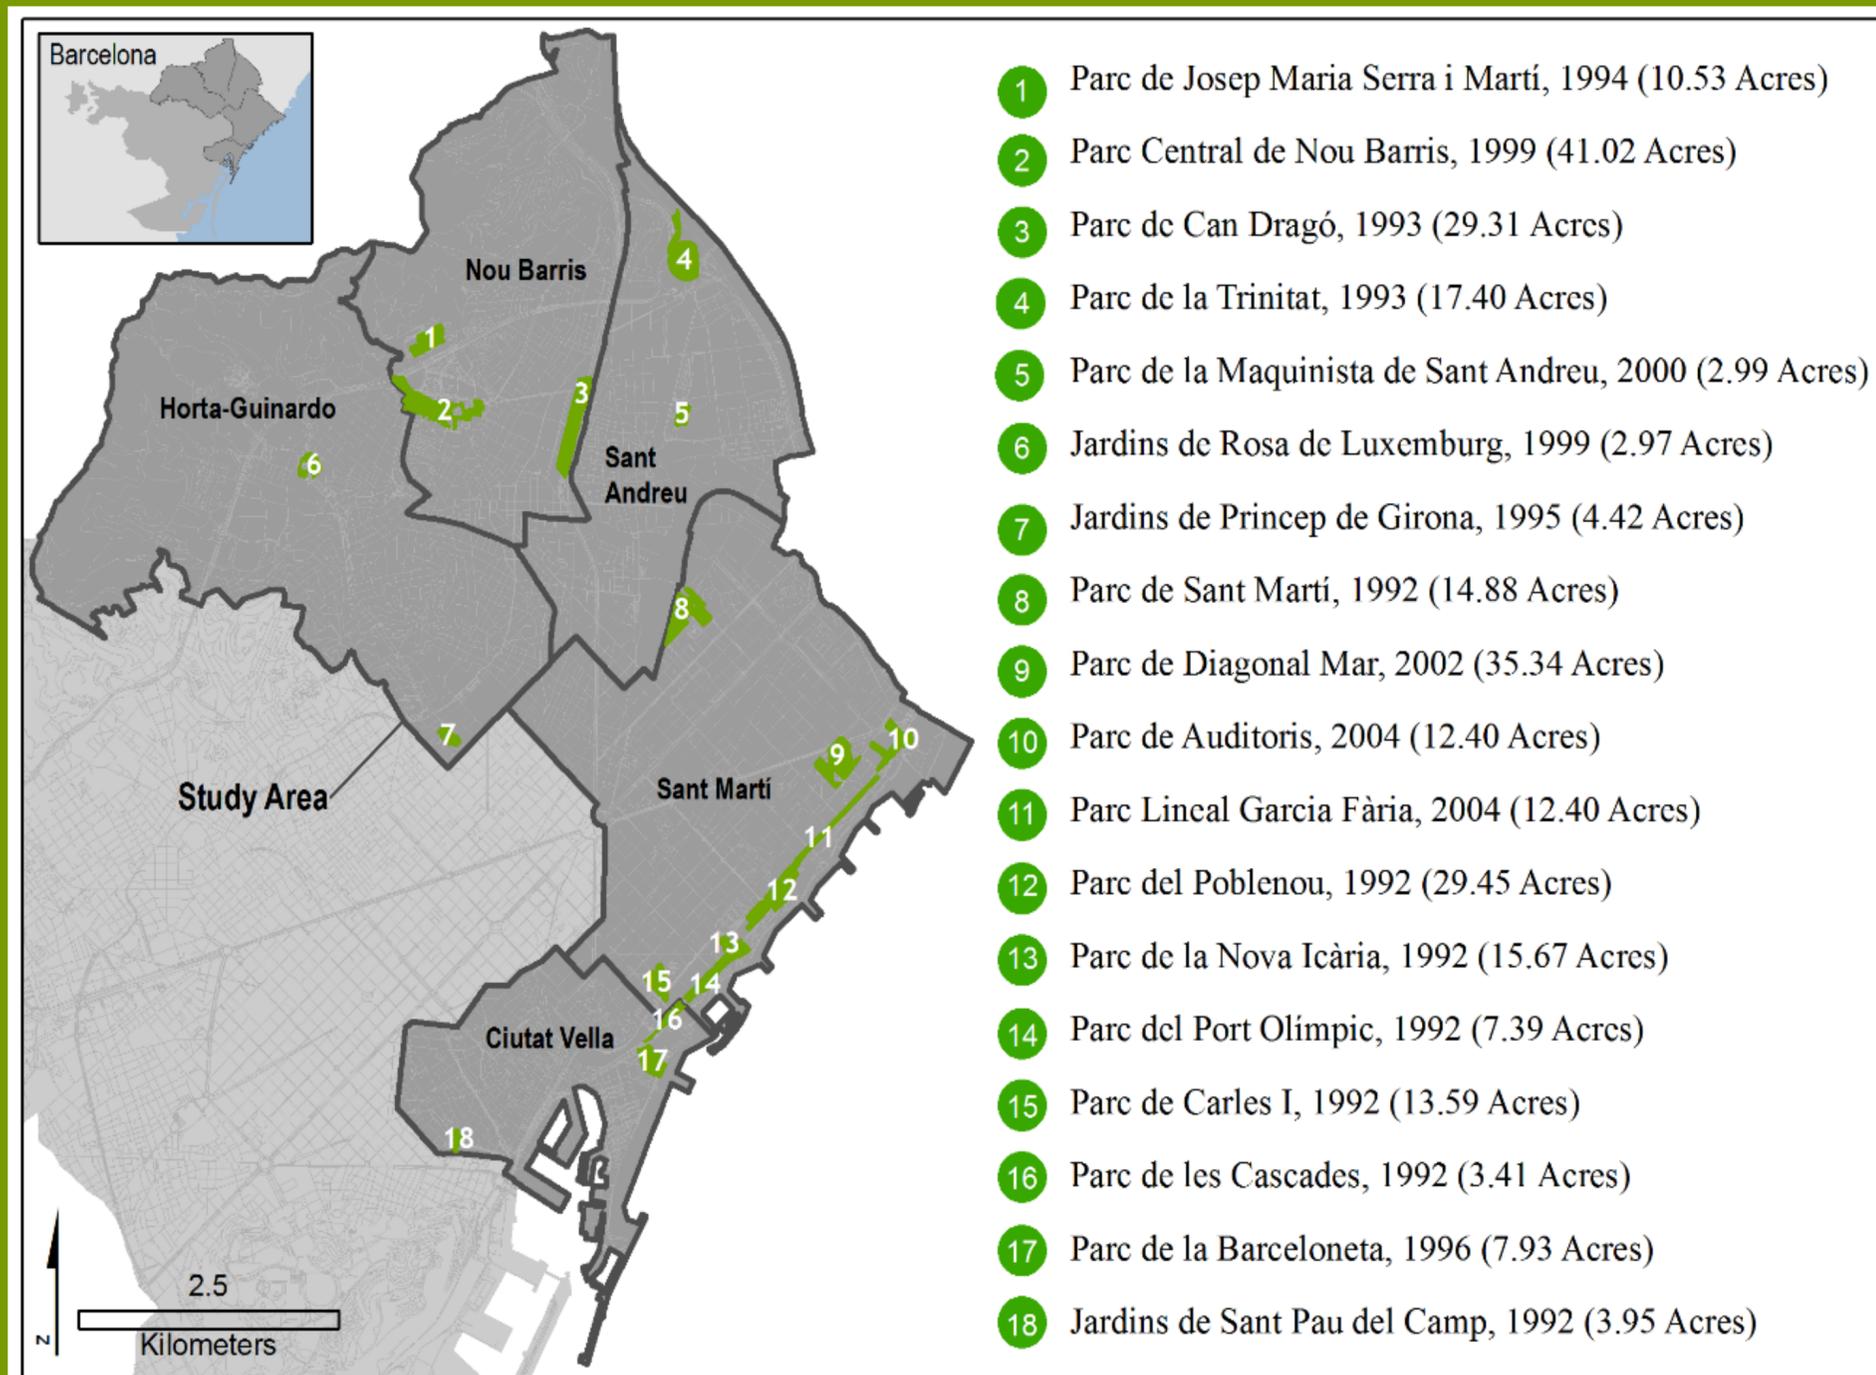

Under which conditions do urban greening projects in distressed neighborhoods positively redistribute access to environmental amenities?

Do new green spaces provide amenities for marginalized residents or do they contribute to their displacement?

# Barcelona Pilot study

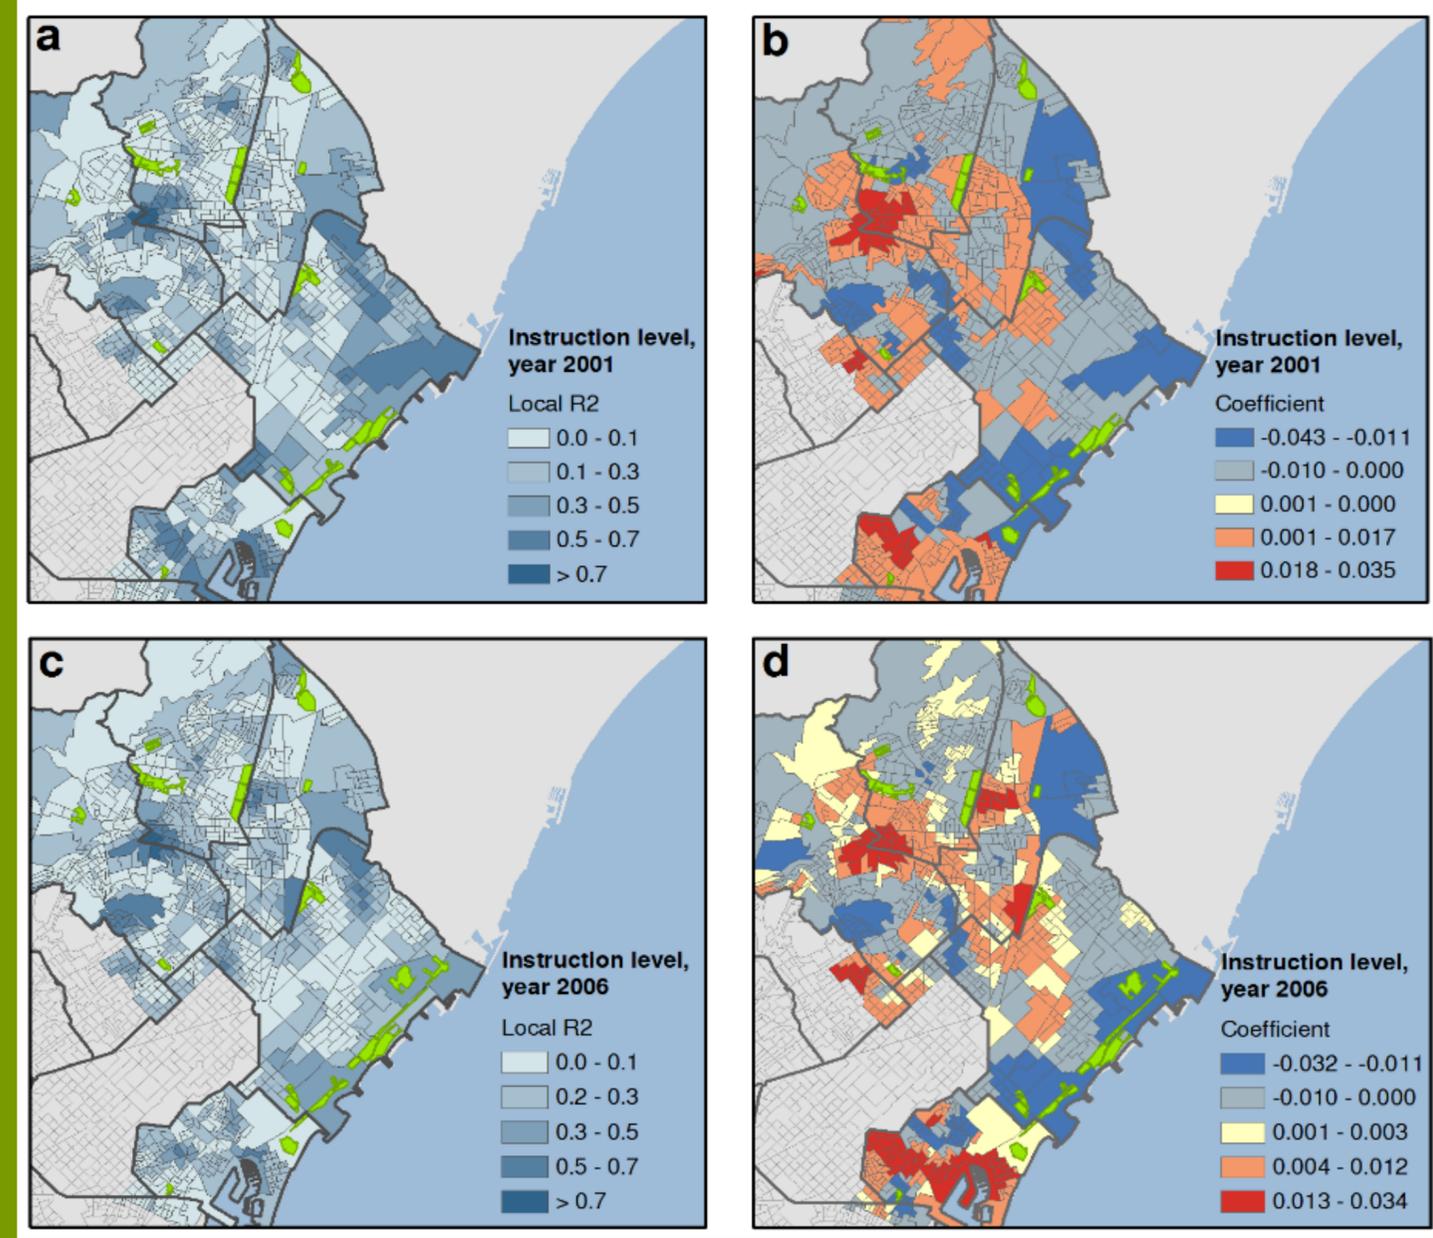

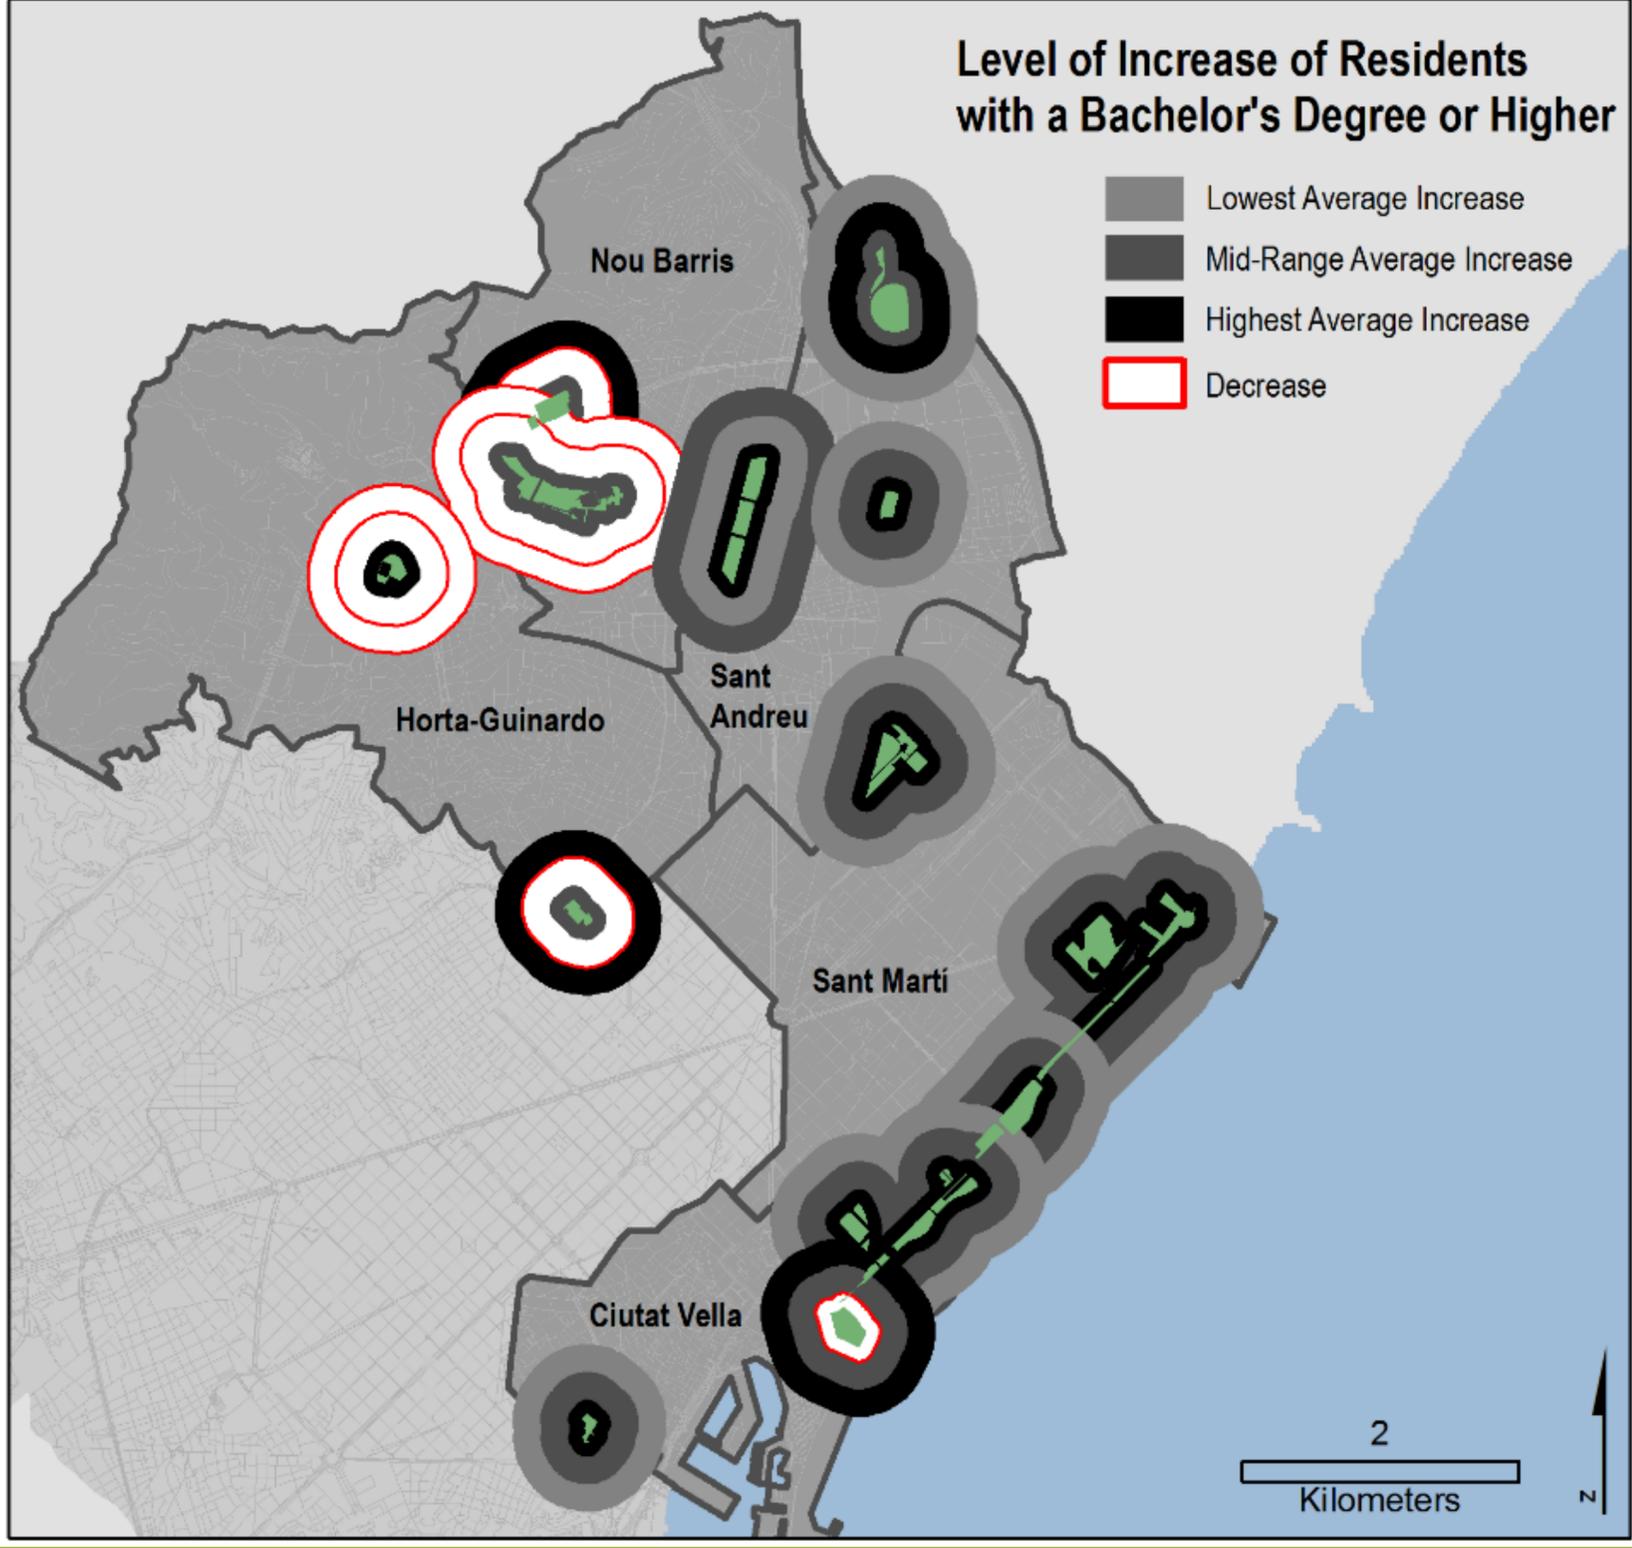

## Data & Methods

- Mapping of 18 parks in 5 contiguous districts
- Baseline data from 1990:
  - % of residents with college degree
  - % of residents whose nationality is from the Global North/Global South
  - % of residents over 65 living alone
  - Home sale values
  - Household income
- Analysis of changes in 100m, 300, and 500m buffer areas vs. entire district over a period of 4-12 years upon green space construction
- OLS and GWR analysis

### Level of Increase of Residents with a Bachelor's Degree or Higher

- Lowest Average Increase
- Mid-Range Average Increase
- Highest Average Increase
- Decrease

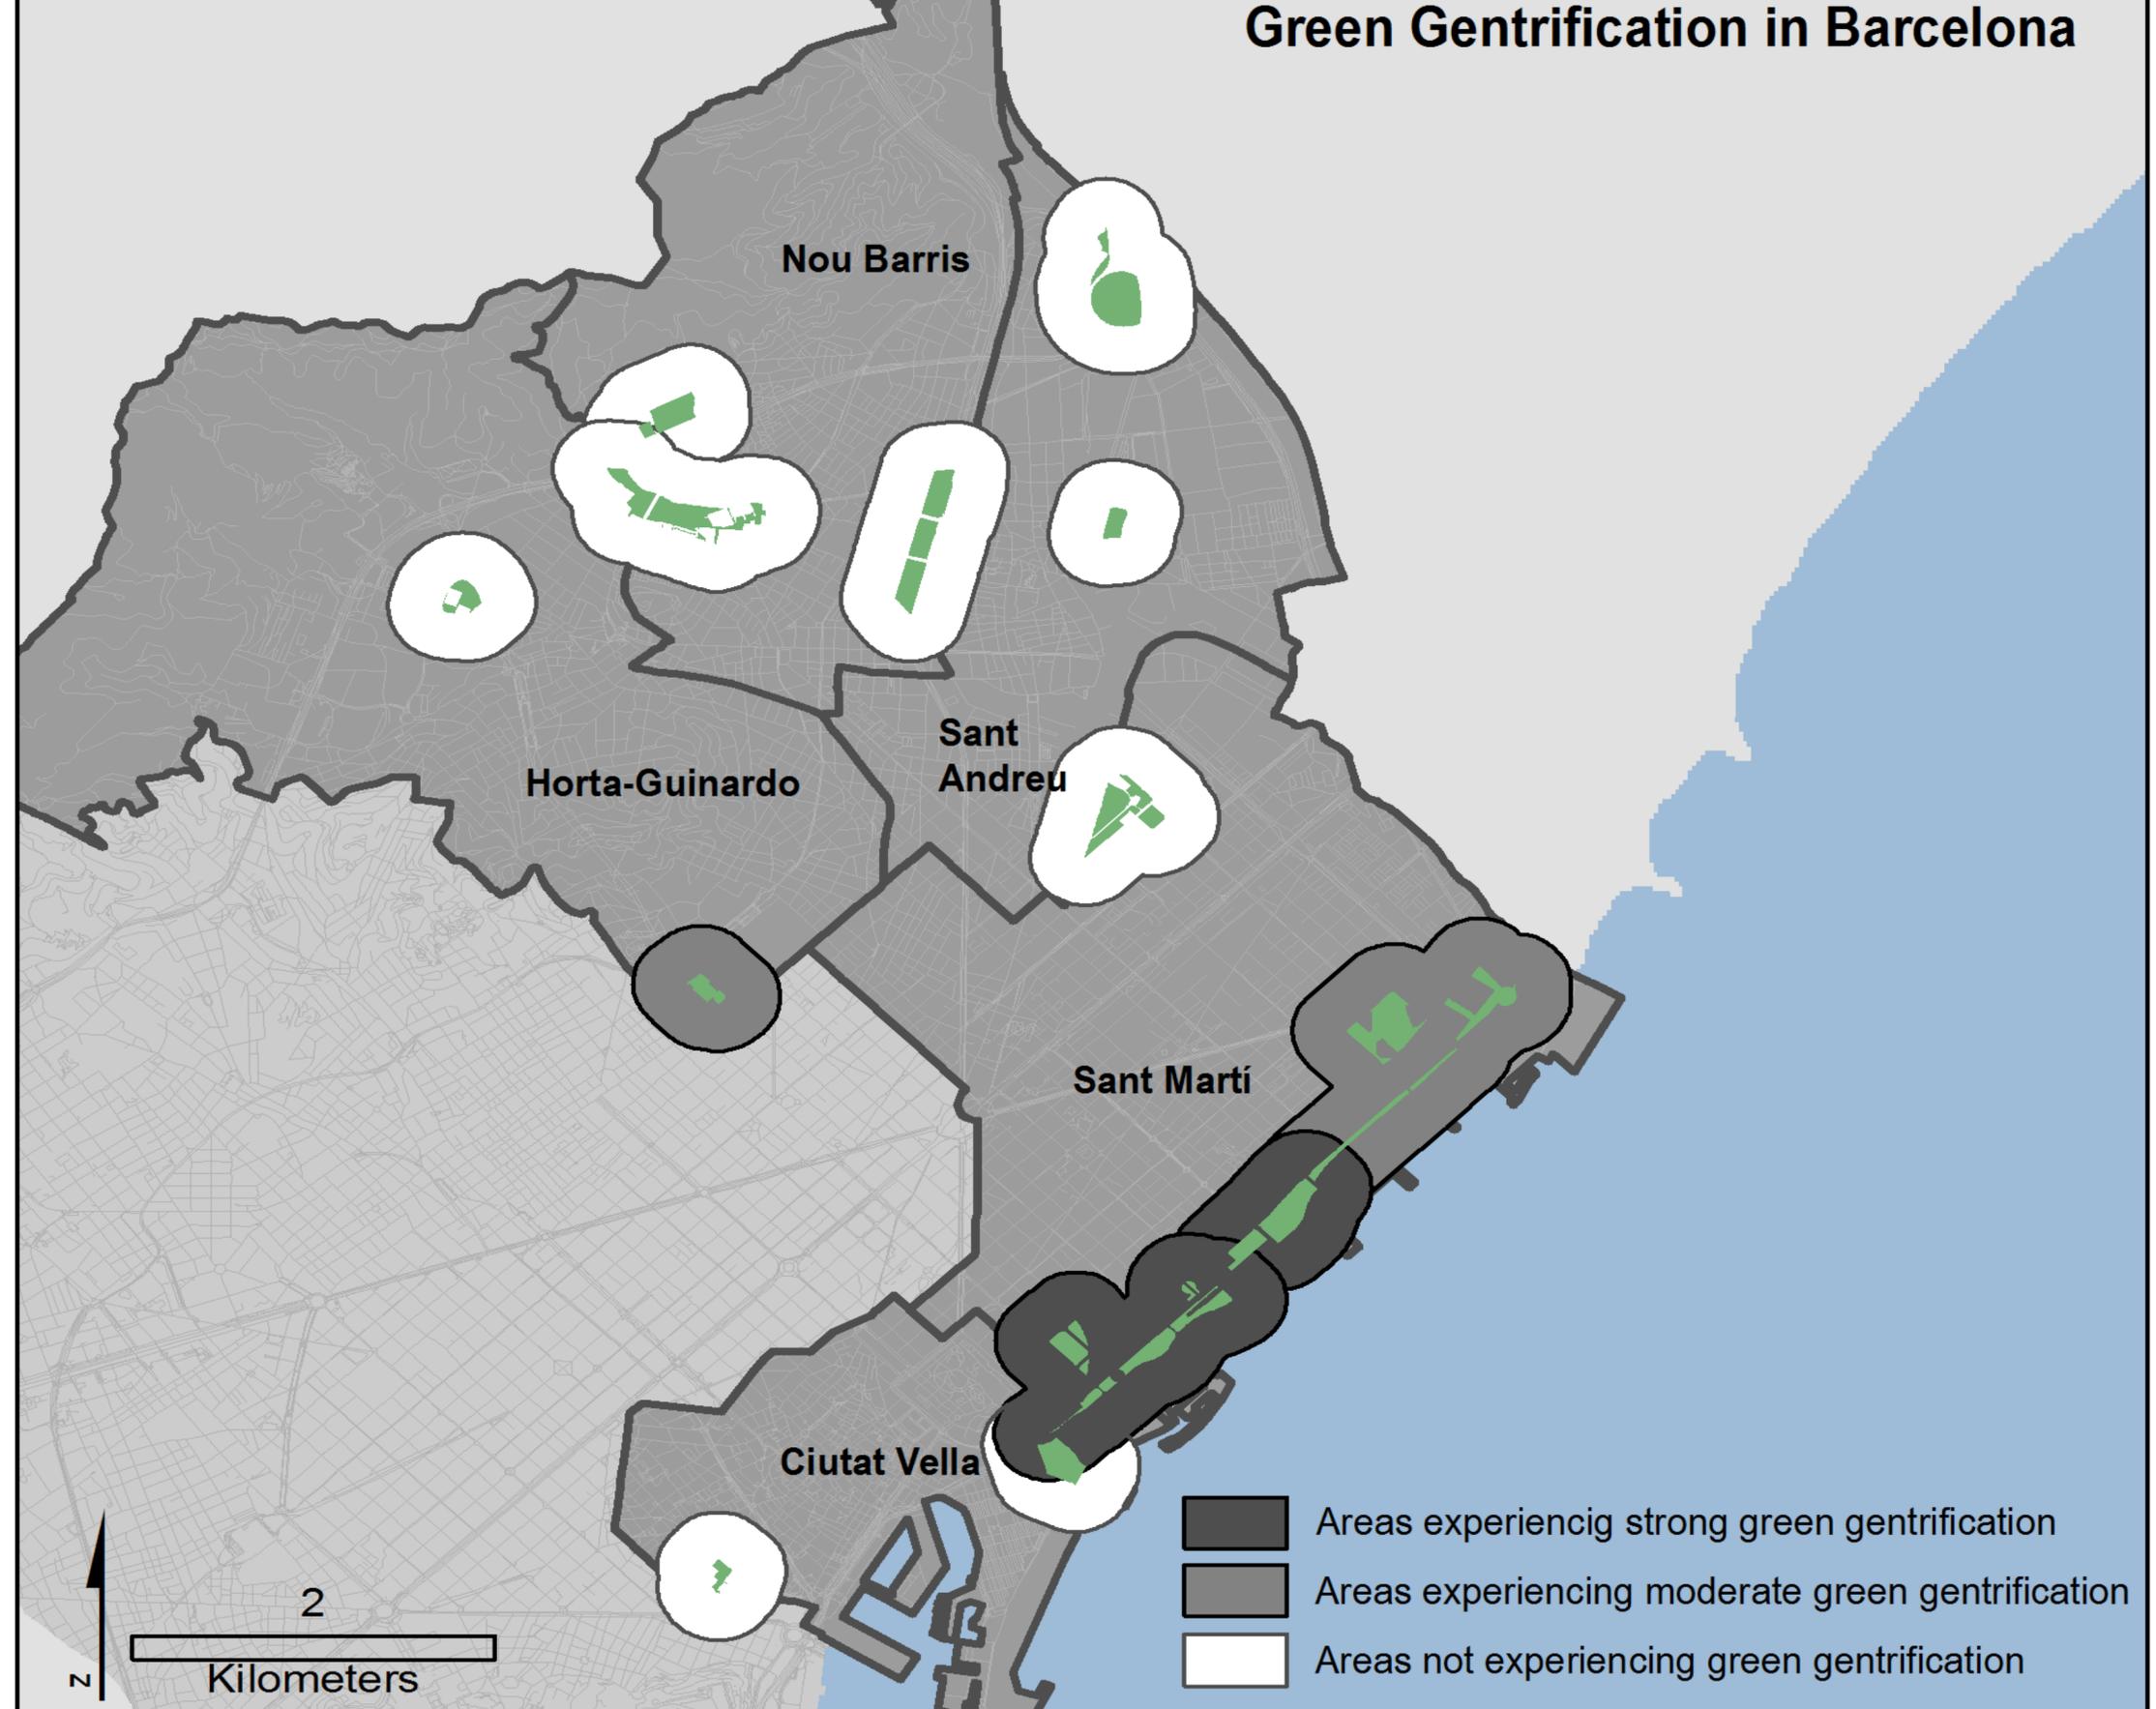

<b>Park Name (Year Built)</b>	<b>District</b>	<b>Bachelor's Degree</b>	<b>65 or Older Living Alone</b>	<b>Global North</b>	<b>Income</b>	<b>Home Sales</b>	<b>Total</b>
Jardins de Sant Pau del Camp (1992)	Ciutat Vella	0	0	0	1	0	1
Parc de la Barceloneta (1996)	Ciutat Vella	1	1	0	0	0	2
Jardins Príncep de Girona (1995)	Horta-Guinardó	0	1	1	0	1	<b>3</b>
Jardins de Rosa de Luxemburg (1999)	Horta-Guinardó	1	0	0	0	0	1
Parc de Can Dragó (1993)	Nou Barris	1	0	0	0	1	2
Parc Josep M. Serra i Martí (1994)	Nou Barris	0	0	0	0	1	1
Parc de Nou Barris (1999)	Nou Barris	1	0	0	1	0	2
Parc de la Trinitat (1993)	Sant Andreu	1	0	0	1	1	2
Parc de la Maquinista (2000)	Sant Andreu	1	1	0	0	0	2
Parc de Sant Martí (1992)	Sant Martí	0	0	0	0	0	0

Parc de Diagonal Mar (2002)	Sant Martí	1	1	0	1	0	<b>3</b>
Parc del Port Olímpic <sup>1</sup> (1992)	Sant Martí	1	1	1	1	0	<b>4</b>

Overall green gentrification indicator scores for parks within the study area

# Results

## Green Gentrification in Barcelona

# Barcelona Discussion

- Sant Martí experienced strong environmental gentrification
  - Changes have been accompanied or followed by revitalization projects
- Northwestern Barcelona has not experienced green gentrification
- Mixed results for Ciutat Vella

# Barcelona Conclusion

- Impacts of new parks in vulnerable neighborhoods depend on their context of creation, setting, and built environment
- Green gentrification has NOT occurred in dense distressed neighborhoods or in neighborhoods with a semi-old building stock associated with dictatorship or transition projects
- Some areas have gained vulnerable residents, which points to new forms of socio-spatial segregation

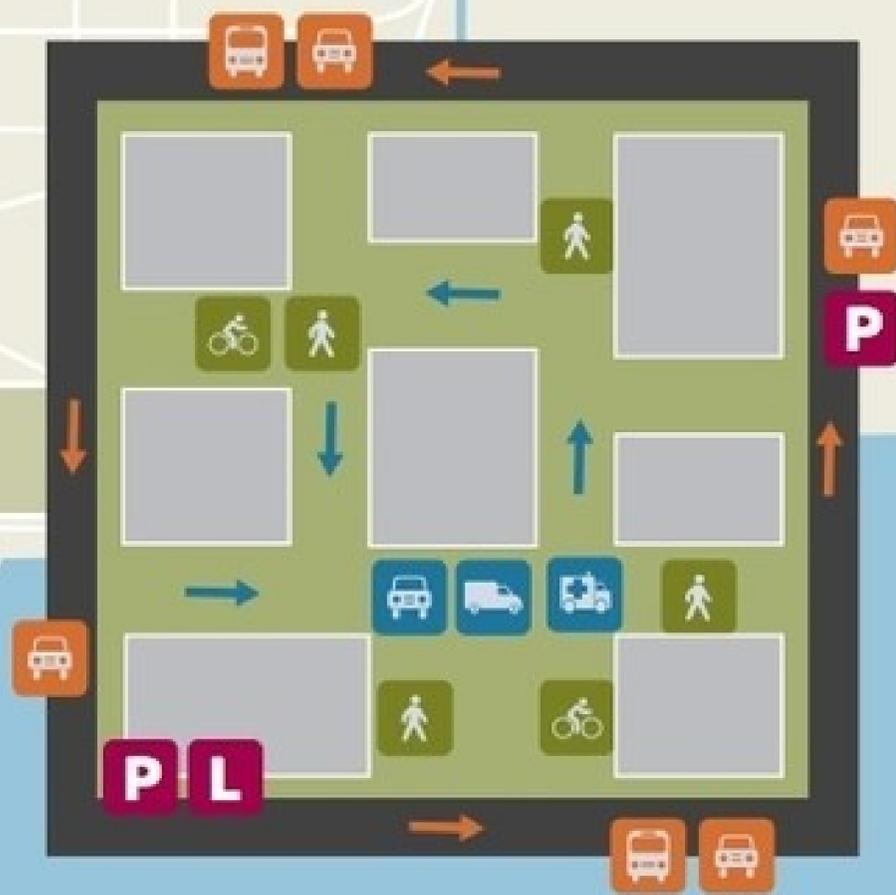

# Les cinc superilles pilot

## Esquema original de superilla de l'Agència d'Ecologia Urbana de Barcelona

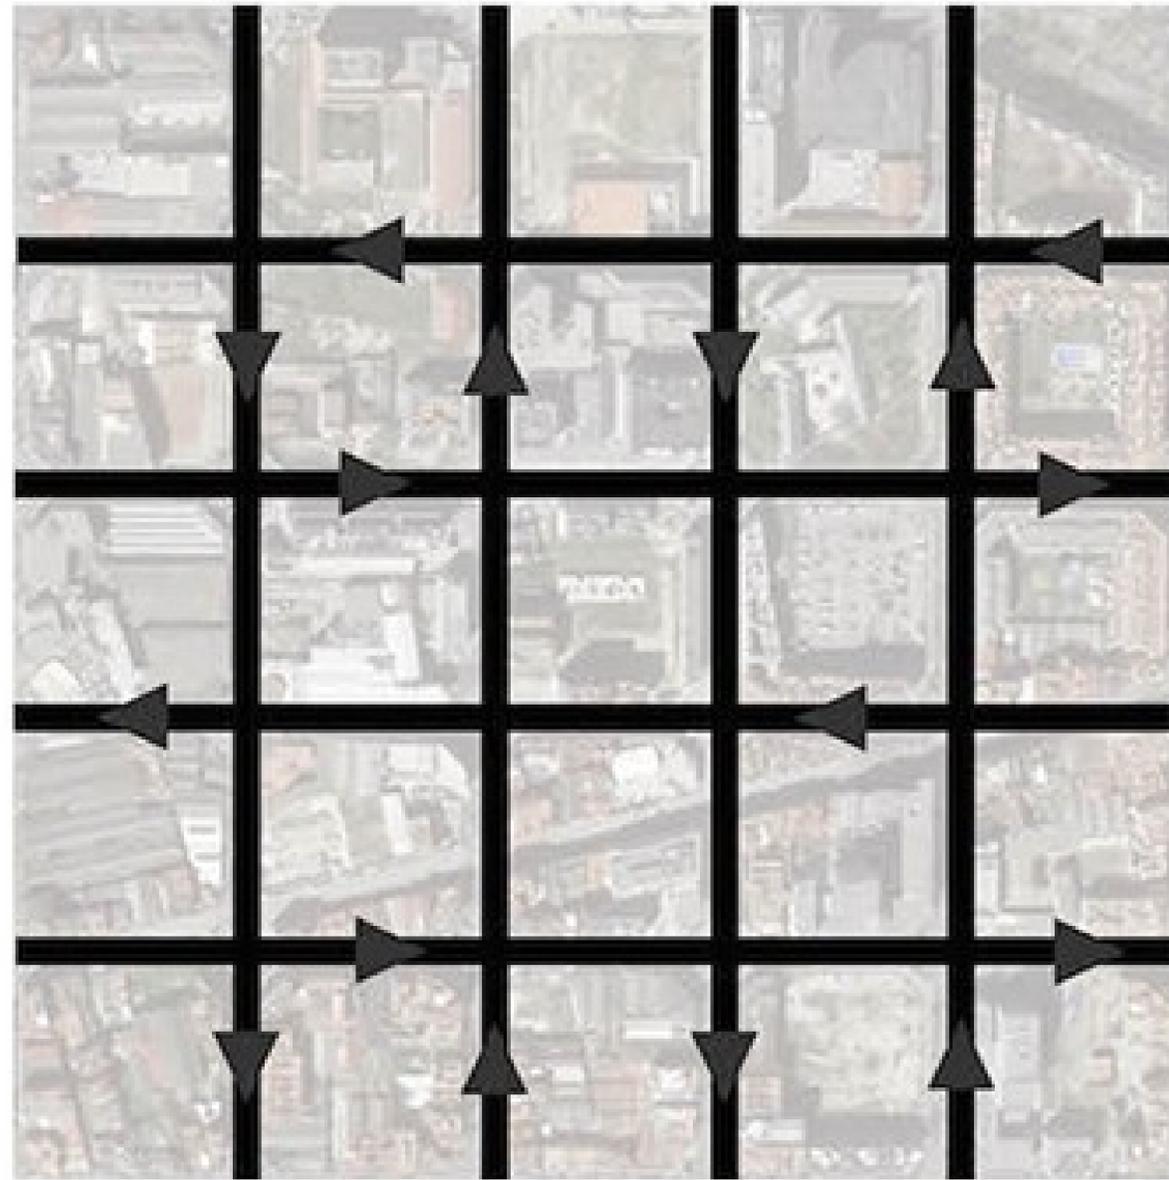

(No directament aplicable a les cinc superilles pilot)

- Vehicles de pas i transport públic
- Trànsit de vianants i de bicicletes
- Vehicles de residents, càrrega i descàrrega, emergències
- Aparcaments i plataforma logística
- Xarxa bàsica
- Xarxa secundària interna
- Eix viari per al vianant i altres usos de l'espai públic
- Eix viari per al transport motoritzat

# Road hierarchy in a Superblock model

## CURRENT SITUATION

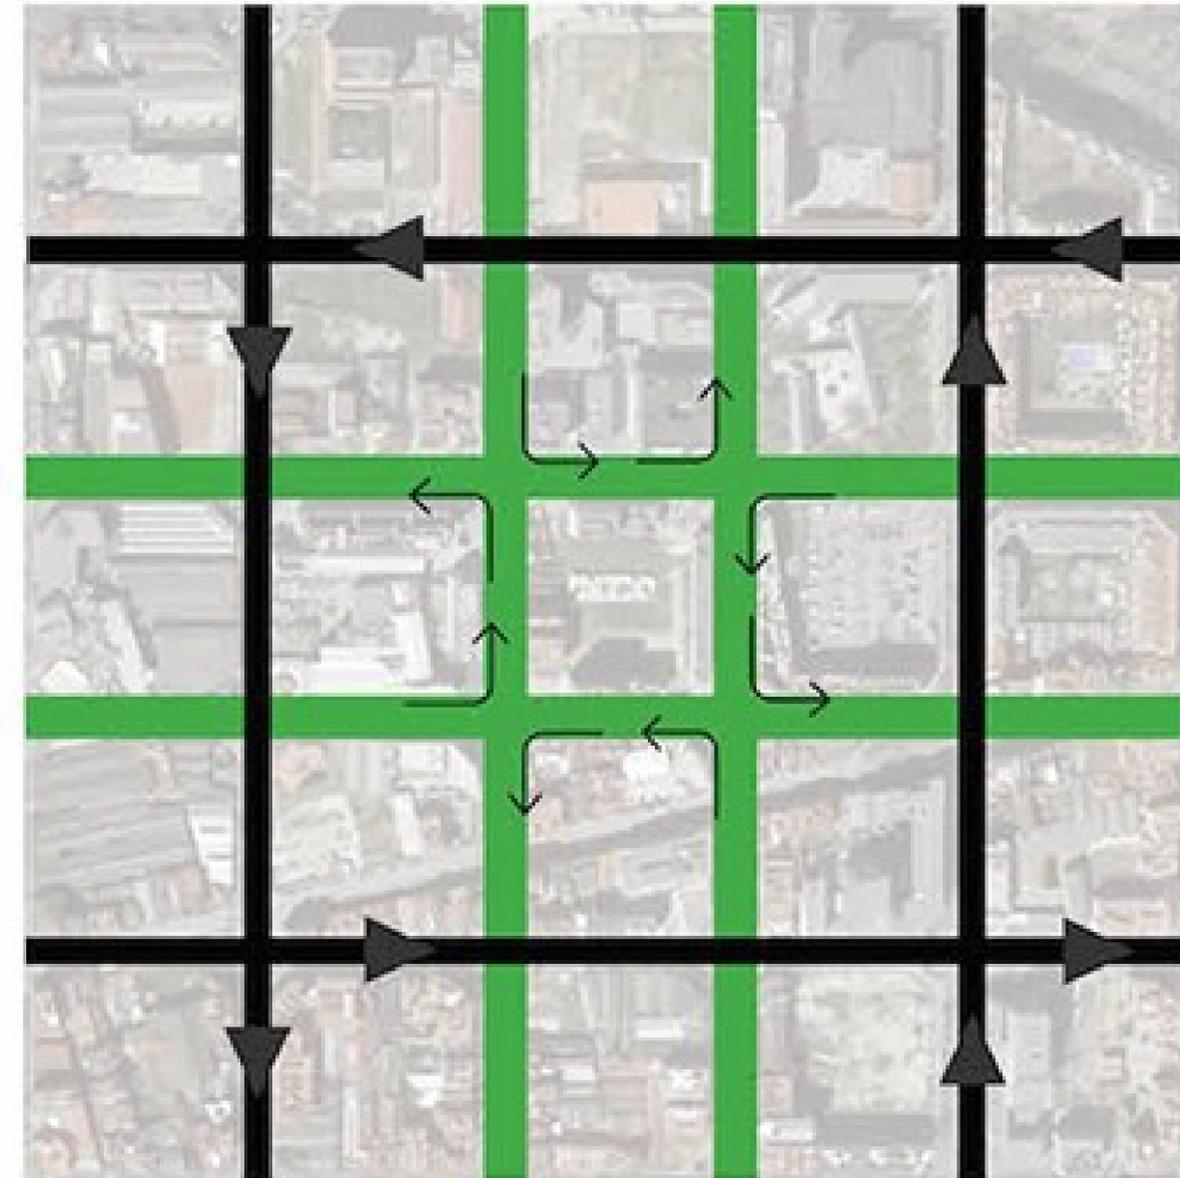

400 meters

Basic network: 50 km/h

## SUPERBLOCK

400 meters

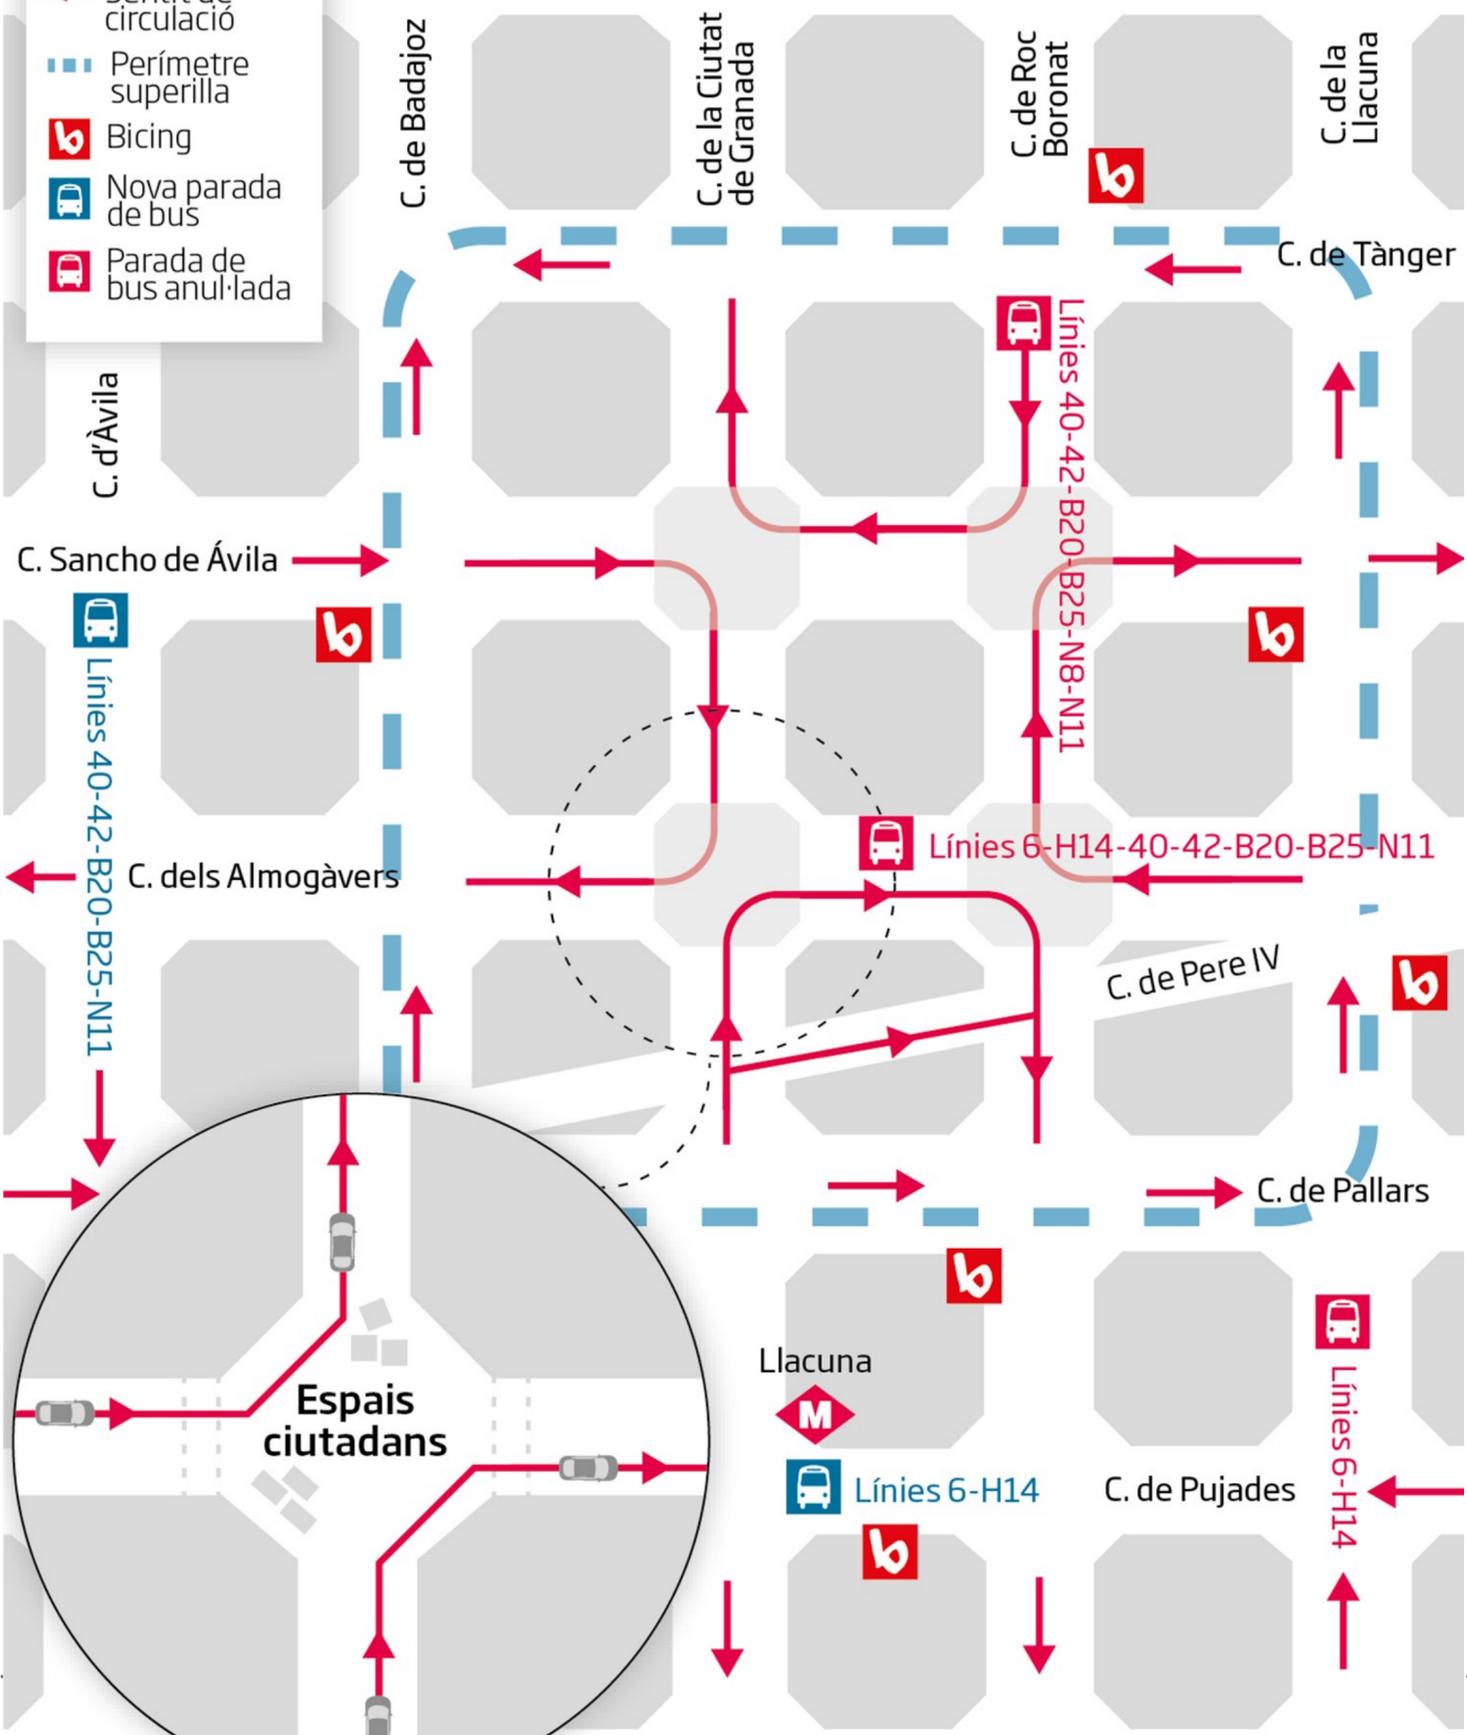

Local network: 10 km/h
